Ordering information

Explanation

Packing unit = minimum order quantity (here: 10)

Example: Packing unit contains 10 items, material number 3 842 523 258
 Order 1x 3 842 523 258 = delivery of 1x minimum order quantity 3 842 523 258 = 10 items
 Order 15x 3 842 523 258 = delivery of 2x minimum order quantity 3 842 523 258 = 20 items

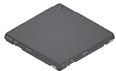

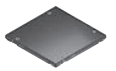

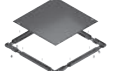

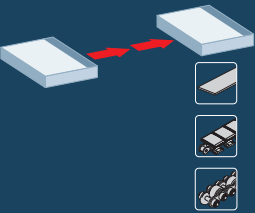

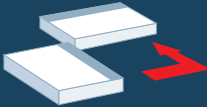

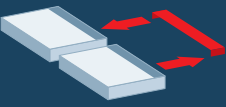

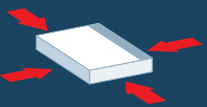

Delivery unit = delivery quantity (here: 16)

Example: Delivery unit contains 16 items, material number 3 842 532 695
 Order 1x 3 842 532 695 = delivery of 1x delivery quantity 3 842 532 695, SP 2/B, l = 6070 mm = 16 items
 Order 15x 3 842 532 695 = delivery of 15x delivery quantity 3 842 532 695 SP 2/B, l = 6070 mm = 240 items

Conveyor medium

	Belt
	Toothed belt
	Plastic flat-top chain
	Plastic accumulation roller chain
	Steel accumulation roller chain
	Accumulation roller chain <i>Vplus</i>
	Duplex chain
	Round belt
	Specific section load/cm = WT total weight/support surface length

Transfer system TS 2plus: Features

The Bosch Rexroth transfer system TS 2plus is designed for the transportation of workpiece pallets with a total weight of up to 240 kg and is a good all-rounder in economical production. It is a diverse modular system that meets the requirements of a wide range of different products. It's no surprise that TS 2plus has become the leading transfer system in a wide range of industries over the years.

OPERATING PRINCIPLE

On an assembly line, a transfer system transports workpieces from one station to another. Two constantly moving belts, toothed belts, flat-top chains, accumulation roller chains or round belts convey the workpiece pallets (WT) by means of friction – with the TS 2 Booster, transport is carried out precisely with linear motors.

The WTs hold the workpieces. All workpiece finishing takes place on the WTs. Information about destination and processing stage are carried in the WT data storage. The stop gate (VE) stops the WT at the stations (areas for manual work or automated stations), while the conveyor medium continues moving.

Several WTs can build up in front of individual stations to form small buffers. Once a processing stage is completed at the station, the WT is released to travel on to the next work station. The pneumatic VE is opened, either manually controlled or with a station control. At the end of the assembly process the workpiece is removed from the WT.

TS 2plus features standardized modular units, that can be combined in many ways to create a single system. This permits a wide range of variants to be constructed and tailor made for individual requirements. The modular design permits the cost-effective use of ratio potentials in production. All components are of robust design and can therefore be reused for mounting future product generations.

Diverse, sturdy, adaptable

Due to the large number of modular components incorporated in the system, it can be adapted to suit specific production conditions and individual layouts without requiring any extra parts:

- ▶ Four types of conveyor media (polyamide belts, toothed belts, flat-top chains and accumulation roller chains) which can be combined together to meet the needs of the assembly process
- ▶ In addition, the new linear motor system TS 2 Booster for the ultra-fast short cycle

- ▶ Workpiece pallet dimensions (from 160 x 160 mm up to 1200 x 1200 mm) specifically designed for the product sizes
- ▶ High maximum load of up to 240 kg per workpiece pallet

Special modular units TS 2plus

Apart from the different types of conveyor media, the TS 2plus also provides an abundance of specific components for curves, transverse conveyors, positioning units and drive units. The time and effort spent on planning and designing can be reduced to a minimum using predefined macro modules. Material combinations that can be ordered from the catalog have been optimized for standard operation with TS 2plus. For special applications, additional material combinations are available. Your Rexroth representative will be pleased to support you in choosing an appropriate solution where required.

COMBINATION OF WORKPIECE PALLETS AND MODULES

AMBIENT CONDITIONS

Operating principle: 1. Choice of system

To ensure the most economical operation possible, an assembly line requires precise forward planning. Later conversions must be as simple and cost-effective to execute as possible in order to be able to respond to future market demand. The key factors when selecting a suitable transfer system are the weight and quality of the workpieces to be conveyed as well as the particular production environment.

The flexible construction kit of the transfer system *TS 2plus* from Bosch Rexroth covers a very wide range of requirements: with the wide range of mutually compatible modular units and macro modules permit a large variety of layouts with manual and automatic processing stations to be created. Solutions for maximum repetition accuracy or for especially heavy workpieces can be implemented easily using standard components. The future-proof transfer systems *TS 2plus* are designed for high availability, even under the harshest conditions.

TS 1: 0 – 3 KG

The transfer system TS 1 is specifically tailored to small, lightweight products and assemblies, which require high positioning and repetition accuracy.

TS 2plus: 0 – 240 KG

From the automotive and the electrical industry to household and electrical device production, the assembly lines TS 2plus are suitable for use in a wide range of industries with their versatile system components.

NOW WITH
**TS 2
Booster**
10X FASTER IN
SHORT CYCLE

TS 2 Booster: 0 – 50 KG

The TS 2 Booster supplements the TS 2plus in the short-cycle range for such sections of an assembly line that should be particularly fast or where parallel process stations would otherwise be required – particularly advantageous for cycle times of less than 4 to 5 seconds.

TS 5: 0 – 400 KG

The roller conveyor of the transfer system TS 5 conveys loads of up to 400 kg, over long distances where necessary. Its robust construction makes it particularly suitable for harsh environments.

Operating principle:

2. Workpieces to be transported

Workpiece pallet (WT)

The workpiece pallet (WT) transports the workpiece from one processing station to the next on the transfer system. Rexroth workpiece pallets are available in several versions for different applications:

The complete plastic WT 2/E handles the transportation and positioning of lighter workpieces. The more robust models WT 2 and WT 2/H, with their steel or aluminum carrying plates, are also suitable for medium and heavy loads. WT 2/LS for use in the TS 2 Booster allows a total weight of up to 50 kg.

The WT 2 series workpiece pallets can be configured from components for the individual workpieces. A selection of various frame modules and carrying plates is available for this purpose.

Because the workpiece pallets must be loaded as centrally as possible for optimal transportation, it is advisable to choose larger sized carrying plates for heavier workpieces or for those with uneven weight distribution.

Permitted weights

The WT total weight is limited for each WT size so that the permissible surface pressure is not exceeded.

The total weight of the WT results from the following:

- ▶ Workpiece pallet weight
- ▶ WT load (workpiece, pick-up, etc.)
- ▶ Weight of the special equipment (data storage, etc.)

For workpiece pallets that are not square, please note that the permissible WT total weight (m_G) may be different for longitudinal conveyors and transverse conveyors and the shorter side is the determining factor for the maximum WT load.

Permissible gravity center position

When separating pallets or changing directions, it is important to observe the position of the load center of gravity on the workpiece pallet to ensure that the acceleration forces can be absorbed without any interferences. We generally recommend that:

- ▶ the load should be positioned in the center of the workpiece pallet.
- ▶ the load center of gravity should not exceed a height h_s of $1/2 b_{WT}$ (with $b_{WT} \leq l_{WT}$)

The specified performance data relates to the illustrated gravity center position.

Available workpiece pallet (WT) - dimensions

Workpiece pallets with a surface from 160 x 160 mm up to 1200 x 1200 mm (WT 2) or with a surface from 400 x 400 mm up to 1200 x 1200 mm (WT 2/H) allow for correct adaptation to the particular workpiece geometry. If necessary, a number of workpieces can be accommodated on a single workpiece pallet (WT).

Operating principle:

3. Layout planning

When planning the system layout, it is very important to take into account the individual requirements, targets and priorities of the company. A very flexible system is often required for complex assembly procedures. This may be due to:

- ▶ frequent product conversions
- ▶ cycle problems due to different models
- ▶ differences in the work involved at each station
- ▶ frequent product alterations
- ▶ great fluctuation in number of workpieces

In cases like this, it is practical to outfeed the WT off the main conveyor (main circuit) into a shunt system which is independent of the main cycle. The term main circuit is used to describe workplaces or stations arranged in series. A shunt is when WT are fed out of the main circuit for processing independently of the main cycle, and then fed back into the main circuit.

MIXED SYSTEMS

Rectangular circuit with parallel workplaces

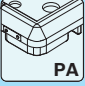

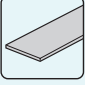

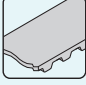

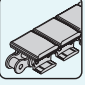

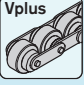

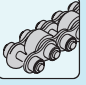

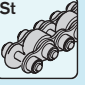

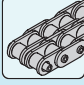

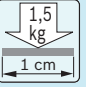

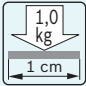

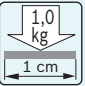

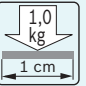

Operating principle: 4. Conveyor media TS 2plus

- The load capacity for a workpiece pallet results from:
- ▶ the combination of conveyor medium, glide profiles, and workpiece pallet wear pad as well as
 - ▶ the surface length on the conveyor medium

Toothed belt, belt, plastic flat-top chain, roller chain, duplex chain as standard – linear motors and electromagnets in the TS 2 Booster

	 Standard wear pad					 Special wear pad			
Conveyor medium					 <small>10x FASTER IN SHORT CYCLE</small>				
Steel glide profile									
Plastic glide profile									
Linear guide with rollers					*				

* Observe the specifications of the individual modular units for the technical data of the workpiece pallets

Permitted section loading

When designing the conveyor sections, it is important to ensure that the sum of the total weights of all workpiece pallets, which are on the conveyor section in accumulation operation at one time, is less than the section load for the conveyor section.

The permitted section loading in accumulation is specified on individual drive modules and belt sections. If the permitted section loading for the conveyor section is exceeded, the section must be divided into several individual sections.

$\Sigma m_G = \text{section load}$

Operating principle:

5. Combination of workpiece pallets, components and modules

ASSIGNMENT OF WEIGHT CLASSES – PRODUCTS

Workpiece pallets	WT 2 ≤ 400 mm	WT 2	WT 2/H	WT 2/H
Typical total weights of the WT in the application	Small total weights 0 – 30 kg	Medium total weights 30 – 100 kg	Medium total weights 30 – 100 kg	High total weights 100 – 240 kg

Operating principle:

6. Combination with TS 2 Booster (linear motor section LS 2)

The Rexroth transfer system TS 2 Booster is designed for limited short-cycle applications within the system TS 2plus: ideal for sections in front of and in process stations that require a particularly fast WT change of up to 0.3 s.

Features

Workpiece pallets with a total weight of up to 50 kg are transported via a system driven by a linear motor that seamlessly fits into a line TS 2plus. Without stopping, the WT is transferred from the TS 2plus into the section TS 2 Booster.

Standardized modular units deliver the WT maximum precision of up to $\pm 15 \mu\text{m}$. Flexible control and with accelerations of up to 4 g. The dynamics can be individually adjusted for each WT, stopping without collision and jerk-free start-up can be guaranteed even for the most sensitive products.

Use in system TS 2plus

The various WT variants up to a size of 400 x 640 mm, the high total weight of up to 50 kg, the modular design plus the interaction of extreme dynamics and precision make the TS 2 Booster very versatile. This smart sprinter can use its strengths directly in many systems TS 2plus, especially in the automotive, electronics, medical technology, acoustics and optics sectors and accelerate processes.

PRODUCT RANGE

Linear section LS 2

- ▶ Linear motors
- ▶ Measuring system
- ▶ Guide
- ▶ Fastening elements with tolerance compensation

Workpiece pallet WT 2/LS

- ▶ WT 2 up to 400 x 640 mm ($b_{WT} \times l_{WT}$)
- ▶ Guide system with corner modules
- ▶ Feed magnet
- ▶ Measuring magnet

Leg sets SZ 2/LS

- ▶ SZ 2/LS MID, SZ 2/LS END

Lubrication unit LU 2/LS

A

GUIDE RAIL

The low-wear roller guide rail enables precise and zero-clearance positioning of the workpiece pallet on the linear section (LS 2)

B

MOTOR

Stationary electromagnet – contrary to the circular arrangement in the rotary motor, the electromagnets are placed next to each other in the linear motor

C

SENSOR SYSTEM
Contactless, dirt-resistant absolute measuring system for detecting WT positions on the linear section using measuring magnets (Hall sensor system)

D

WORKPIECE PALLETS
Permanent magnets mounted on the bottom of the WT 2/LS ensure the required feed according to the "moving magnet motor" principle

E

LEG SETS
The leg sets are suitable for accommodating the heavy-duty, single-track linear section LS 2

F

LONGITUDINAL/CROSS CONNECTORS
To compensate for the higher dynamics of the system, e.g. by fast stop or acceleration, all construction elements are designed accordingly stable

The linear motor principle in the TS 2 Booster

A linear motor is an uncoiled rotary motor – the electromagnets are not arranged in a circular form but linearly. With the TS 2 Booster, a stationary electromagnet with moved permanent magnets is the basis ("moving magnet motor"). For this purpose, the workpiece pallet is equipped with a permanent magnet on the bottom side and the linear section itself contains the stationary electromagnets. With this design principle, there is no need for power feed to the WT.

With roller guide and absolute measuring system

A guide and a measuring system are required to transport the workpiece pallet precisely and to position it exactly. The TS 2 Booster is guided via rollers on the WT with a lateral guide on the linear section. The measurement is carried out using a contactless absolute measuring system

with Hall sensor technology. The measuring system is integrated into the linear section. Therefore, in addition to the feed magnet, each WT has another (smaller) position magnet on the bottom side for position detection on the linear section. Each WT can be individually moved on the linear section – reversible, at different speeds with a special sequence. You have free reign.

Workpiece pallet WT 2/LS

The WT 2/LS consists of the WT 2 standard carrier with the defined parameters wear pad PA and aluminum carrying plate in standard dimensions as well as a feed magnet, a measuring magnet and guide rollers. In addition, the workpiece pallet is also specified by its defined orientation.

TECHNICAL DATA

WT 2/LS widths	160 to 400 mm
WT 2/LS lengths	160 to 640 mm
Total weight of WT	max. 50 kg
Speed	max. 4m/s (240 m/min)
Acceleration	max. 40 m/s ² (4 g)
WT changing time	up to 0.3 s
Accuracy at 1 WT	up to ±15 µm
Additional process force	
in x/y/z direction	0/500/100 N
Section lengths	306 to 3672 mm

MOTOR VARIANTS

Equipping options

The conveyor section LS 2 driven by a linear motor is perfectly matched to the system TS 2plus with a length division of 306 mm of the motors and 4 standard widths. The desired dynamics and feed force depends, among other things, on the load and the number of magnet assemblies. Important: only one magnet assembly can be individually moved per segment. The selection of the motor combination is therefore essential for the distances between the workpiece pallets and for performance.

Linear sections with track widths of up to 320 mm are equipped with a motor module, two parallel motor series are used at a track width of 400 mm.

Motor 306-1

- 1 motor with 306 mm
- 1 segment, each 306 mm
- 1 sensor, each 306 mm

- + lower costs
- + minimum installation work
- larger WT distance required (recommended for WT lengths of 400 mm and in mixed operations)

Motor 306-3

- 1 motor with 306 mm
- 3 segments, each 102 mm
- 3 sensors, each 102 mm

- + better performance
- + higher load capacity
- increased effort (hardware, installation, commissioning)

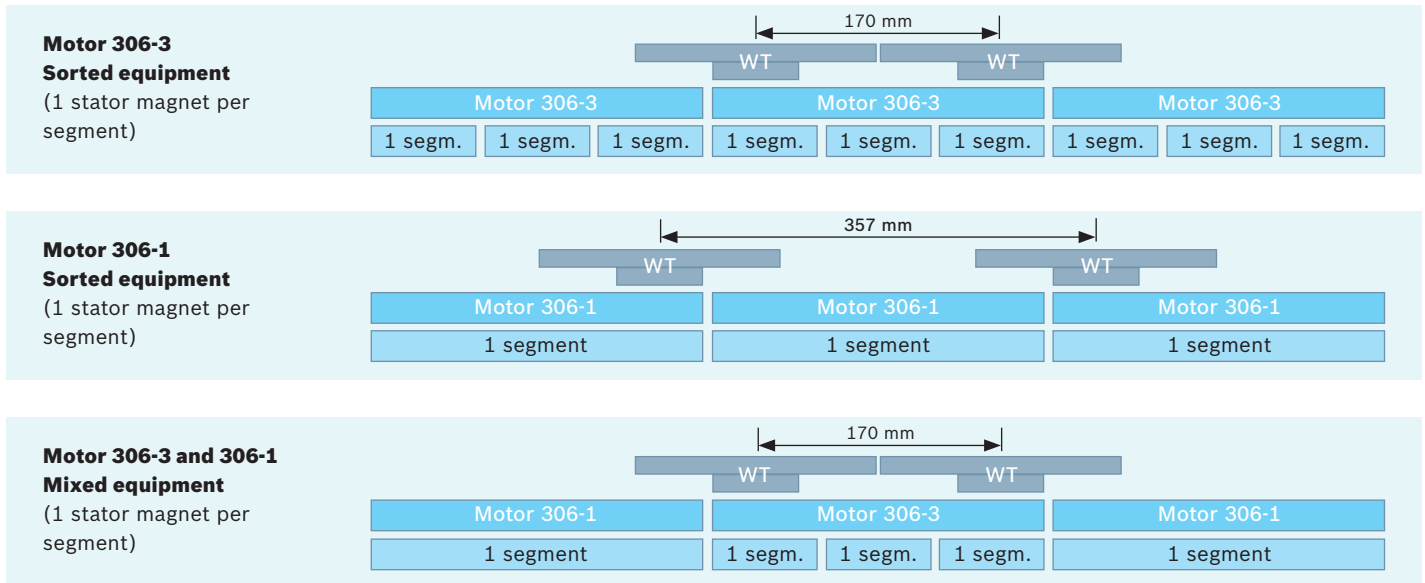

► **WT bottom side with two magnet assemblies for double motor modules**

WT type b _{WT} x l _{WT} (mm)	Track width (mm)	Pure 306-1	Pure 306-3	Mixed 306-1/ 306-3	Double track 306-1

- recommended
- possible, depending on application
- not recommended, required/practical in exceptional cases
- not possible

Three examples of the layout of motor equipment for a conveyor section (WT length 160 mm, magnetic assembly length 51 mm)

IMPORTANT NOTES FOR SELECTING THE COMPONENTS

Motor/WT:

- ▶ Only 1 magnet assembly can be moved independently per segment
- ▶ The workpiece pallets must maintain a minimum distance between each other, which depends on the WT length: Distance between WT and WT = segment length + magnet length
- ▶ Systems with a pure 1-segment motor equipment need a larger workpiece pallet distance than lines with 3-segment motors
- ▶ Mixed equipment possible

Dynamics:

- ▶ Short cycle times can only be achieved with short WT changeover times, which in turn depend on the load, the travel acceleration and the WT load of the line.
- ▶ Excessive dynamics and load lead to thermal problems.
- ▶ To ensure that the motor does not overheat even in continuous operation, the following must apply for every segment: $F_{\text{eff}} \leq F_{\text{nom}}$.
- ▶ Synchronous WT changeover is time-optimized.
- ▶ A workpiece pallet must always be on the first, so-called check-in position with the entire magnet in order to achieve the maximum possible dynamics in the system TS 2 Booster.

Sizes/lengths:

- ▶ The section LS, i.e. the section TS 2 Booster, is mechanically limited to 3,672 mm via the guide. Longer sections are possible – please contact us for further information.
- ▶ The smallest practical layout is 2 WT lengths.
- ▶ In terms of control, the maximum number of segments must be taken into account. By default, 24 segments are specified in the catalog by configuration numbers. Greater lengths are, of course, also possible. Please contact us or your system provider.

Critical segments:

- ▶ Sections with frequent acceleration and/or deceleration, as well as segments in the process station are referred to as "critical". It is recommended to always carry out a rough calculation of F_{eff} for these "critical segments".

- ▶ ** The WT 2/LS cannot be inserted into the transverse conveyor on these components.

Operating principle: 7. Ambient conditions

Materials used, media resistance

Rexroth transfer systems are manufactured with high-quality materials to ensure continuous use. They are resistant to lubricating and cleansing agents that are common in an industrial environment.

However, we cannot guarantee that the products contained in this catalog are resistant to all combinations of testing liquids, gases, or solvents. Please contact your Rexroth representative if you have any doubts.

AMBIENT CONDITIONS

Climatic

The transfer systems have been designed for stationary use in a location that is protected from the elements.

- ▶ Operating temperature: +5 ... +40 °C, +5 °C ... +60 °C at 20 % reduced load
- ▶ Storage temperature: -25 °C ... +70 °C
- ▶ Relative humidity: 5 ... 85 %, non-condensing; 1 ... 2 % (dry room)
- ▶ Air pressure: > 84 kPa appropriate for an installation altitude < 1400 m above NN. Load values are reduced by 15 % when the system is set up at an installation altitude that is > 1400 m above sea level.

Biological

Avoid molds, fungi, rodents, and other vermin

Chemical

Do not set up near industrial systems with chemical emissions

Physical

Do not set up near sources of shavings, sand or dust. Do not set up in areas that are regularly jarred by high forces caused by e.g. presses, heavy machinery, etc.

Suitability for electrostatically sensitive areas

Almost all of the components and parts in Rexroth transfer systems are ESD-compatible or available in an ESD-compatible version. They can thus principally be used in EPA (ESD Protected Areas). We do, however, recommend that you contact your Rexroth representative.

OIL

Use in oily environments

For applications where process-related oil can enter the transfer system, we recommend using chains as the conveyor medium (accumulation roller chains, *Vplus* chains or flat-top chains). We do, however, recommend that you contact your Rexroth representative.

Use in dry rooms

TS 2plus has been tested and approved with all conveyor media for use in dry rooms with a relative humidity of 1 to 2 %, e.g. for the production of Li-Ion battery cells. Your Rexroth representative will be pleased to advise you about this.

Use in clean rooms

Almost all the components have been approved by the IPA* for use in cleanrooms and for cleanroom class 7 according to DIN EN ISO 14644-1. Please note that some cleanroom-compatible components have been specially modified. Please contact your Rexroth representative if you require cleanroom components.

Identification and data tag systems

Identification and data storage systems store all product and process-related data directly on the workpiece pallet and enable local or central data processing. Identification and data tag systems are used to control numerous production and transport systems in assembly technology applications.

Data related to objects is the basis for

- ▶ targeted control of processes and processing steps
- ▶ infeeding or outfeeding workpiece pallets according to type or variant when manufacturing product variants on flexible assembly systems.

Energy efficiency – Rexroth 4EE

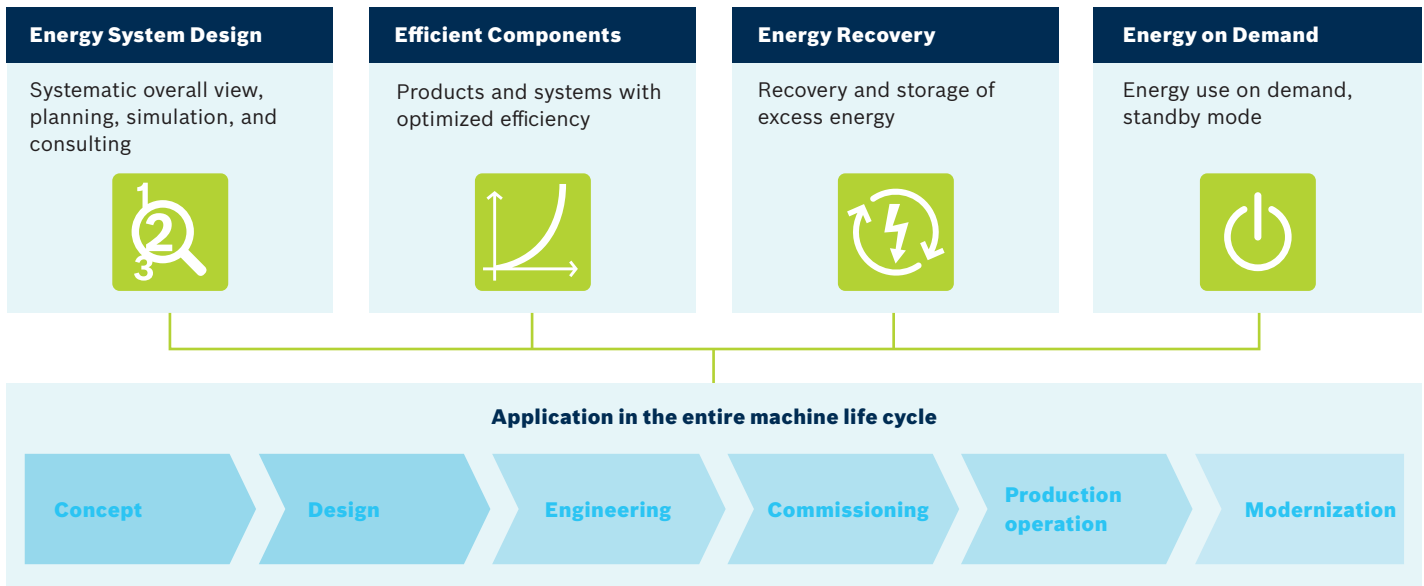

ENERGY EFFICIENCY IS A KEY FACTOR FOR CORPORATE SUCCESS

From an economic point of view, energy efficiency and reduced emissions lower operating costs and bring advantages in the fiercely competitive global market. In addition, they help support compliance with environmental standards.

All potentials for optimization are used effectively when not only the details of a system but the system as a whole is optimized.

The system 4EE features four levers:

Efficient system layout
 To achieve high energy efficiency, the system must be examined as a whole as early as in the planning phase. The construction kit TS 2plus offers numerous modules, all of which enable you to implement a transfer system tailored precisely to the particular application. This effectively prevents over-dimensioning and high energy losses from the outset.

Energy use on demand
 Minimal energy consumption requires the ability to be able to switch off system components on demand. The majority of motors in the system TS 2plus are designed for start-stop operation and frequency converter operation.

Energy-efficient modules
 The modules TS 2plus are equipped with particularly energy-efficient drives. The efficiency of most of the motors already exceed future requirements. The interplay of friction-optimized materials, e.g., on sliding rails, friction-minimizing gear oils and numerous further design details ensures perfect coordination in the overall system.

Worldwide approval
 For international use, most of the motors feature CE, cURus and CCC approvals.

Workpiece pallets

Workpiece pallet selection

2-2

Workpiece pallet selection

The workpiece pallet (WT) is used in the transfer system to convey the workpiece through the processing stations.

To guarantee an optimal transport, it should be loaded in the center.

Workpiece pallet applications

- ▶ Integrated positioning bushings enable defined positioning of the incoming workpiece in the processing station.
- ▶ Optionally available data tags can provide work-related information during processing. This information can be evaluated on-site and also updated.

Various WT workpiece pallets are available:

- ▶ The WT 2/E is an especially inexpensive, light-weight workpiece pallet with an all-plastic design that can be used for simple conveying and positioning tasks (see p. 2-6)
- ▶ The WT 2 is a sturdy and universally applicable workpiece pallet with a steel or aluminum carrying plate (see p. 2-8)
- ▶ The WT-2 components enable individual configuration of the WT using various frame modules and carrying plates, including those provided by the customer (see p. 2-10)
Max. total workpiece pallet weight = 100 kg
- ▶ The WT 2/H with aluminum carrying plate for applications with total weights up to 240 kg (see p. 2-30)
- ▶ WT 2/F with an aluminum frame profile construction can be used for large workpieces. Grooves throughout the frame profile make it easier to install parts holders (see p. 2-41). Max. total workpiece pallet weight = 100 kg
- ▶ WT 2/F-H with the same aluminum frame profile construction, but in the heavy duty version up to 240 kg (see p. 2-43)
- ▶ WT 2/LS based on WT 2 for use in the TS 2 Booster (see p. 2-47)

Size, combination with conveyor medium

The permitted total weight m_G of a workpiece pallet results from the

- ▶ combination of conveyor medium, glide profiles, and workpiece pallet wear pad as well as
- ▶ the surface length on the conveyor medium (see p. 1-12)

The surface length on the conveyor medium may vary in longitudinal and transverse conveying with non-square pallets. The shorter side of the workpiece pallet determines the maximum permitted total weight.

The following estimated parameters can be used:

- ▶ **Conveyor medium belt and toothed belt:** On workpiece pallets with wear pad PA, a specific section load of up to 1 kg/cm is possible
- ▶ **Conveyor medium flat-top chain:** Wear pads PA on the workpiece pallets are recommended in the combination with the plastic flat-top chain. This permits specific section loads of up to 1 kg/cm in the standard design with plastic glide profiles in the section profile. Specific section loads of 1.5 kg/cm are possible with the optionally available version with steel glide profiles.

- ▶ **Conveyor medium accumulation roller chain:** In conjunction with wear pads PE on the workpiece pallets, the standard design with plastic glide profiles in the section profile permits specific section loads of up to 1.5 kg/cm. The optionally available version with steel glide profiles and the accumulation roller chain

with steel rollers can tolerate specific section loads of 2kg/cm

- ▶ **Linear drive conveyor medium (linear guide with rollers):** Observe the specifications of the individual modular units for the technical data of the workpiece pallets WT 2/LS

When workpiece pallets WT 2/E, WT 2, WT 2/F and WT 2/LS are used, the VE 2/... stop gates are mounted directly on the section for lateral separation.

The workpiece pallets WT 2/E, WT 2 and WT 2/F are used up to 100 kg and the WT 2/LS workpiece pallet is used up to 50 kg.

All VE 2/... (without VE 2/...-H) can be used for lateral separation.

All (without VE 2/D...-H) can be used for central separation.

When workpiece pallets WT 2/H and WT 2/F-H are used the stop gates VE 2/D...-H are mounted by a cross strut for central separation.

WT 2/H or WT 2/F-H are used for heavy duty versions up to workpiece pallet total weights of 240 kg.

Mounting in rear right position in the direction of transport, on the **inside** of the workpiece pallet surface

Mounting in front left position in the direction of transport, on the **outside** of the workpiece pallet surface

Mounting inside the workpiece pallet surface

Mounting outside the workpiece pallet surface

The size and position of the positioning bushings is different for the workpiece pallets for lateral separation compared to the types for central separation. This must be

considered when selecting the positioning units.

For more information, see also the table on p. 1-13

Workpiece pallet WT 2/E

- ▶ Including positioning hole for a repetition accuracy of ± 0.3 mm
- ▶ Prepared for the installation of mobile data tags from the ID 10 and ID 200 identification systems
- ▶ Not suitable for accumulation roller chains
- ▶ A standard size with the dimensions $b_{WT} \times l_{WT} = 240 \times 240$ mm
- ▶ Material: All-plastic polyamide version (PA 6)

WT 2/E is a cost-effective workpiece pallet with an all-plastic design, suitable for applications with low loads

from above and on the joints of up to 0.5 kg/cm.

Scope of delivery

- ▶ Workpiece pallet, complete

Condition on delivery

- ▶ Assembled

Workpiece pallet WT 2, fully assembled

- ▶ Suitable for belt, toothed belt, and flat-top chain
- ▶ Robust workpiece pallet with high rigidity
- ▶ Integrated positioning bushings
- ▶ Prepared for installation of mobile data tags of the ID 15 and ID 200 identification system
- ▶ Not suitable for accumulation roller chains
- ▶ Plastic frame modules with universal steel carrying plate
- ▶ 15 standard sizes
- ▶ Material:
 - Frame module with polyamide (PA) wear pad
 - Steel carrying plate (4.8 mm)

WT 2 is a sturdy workpiece pallet with high rigidity in a composite plastic-steel construction used to pick up and convey workpieces in the transfer system TS 2plus. From size 400 x 400 mm, the workpiece pallet plates are

executed as standard with two or four additional threaded holes for reinforcing bolts. Number given in carrying plate table on page 2-12.

Components for workpiece pallets WT 2

To fulfill special needs, the workpiece pallets can also be individually configured in a design where the carrying plate is assembled by the customer. In addition to frame modules with different wear pads, various carrying plates, positioning bushings and all the necessary fastening elements are available.

Carrying plates

- ▶ Steel carrying plates with a thickness of 4.8 mm for workpiece pallets up to medium size High stability allows for easy integration of your own workpiece supports
- ▶ Aluminum carrying plates with a thickness of 8 mm or 12.7 mm are a light and rigid alternative for medium and large workpiece pallets

Positioning bushings

- ▶ For defined pick-up of the workpiece pallet in the positioning units

Accessories

- ▶ Dowel pins to connect the extension modules to the carrying plate
- ▶ Bolts in combination with reinforced frame modules for large workpiece pallets (from 400 x 400 mm) and weights over 50 kg to max. 100 kg.

Frame modules

- ▶ PA frame modules are the basic solution for use on belts, toothed belts, and plastic flat-top chains
- ▶ Wear pads PE are required for use on conveyor medium accumulation roller chains and duplex chains
- ▶ Reinforced (PA or PE) for workpiece pallet total weights > 50 kg AND conveyor speeds > 12 m/min

Frame modules, standard/reinforced

Positioning bushing

2-18

Bolt

2-21

Carrying plates

2-22

Standard frame module

The basic solution PA is suitable for use on the belt/toothed belt and flat-top chain conveyor media.

Frame modules with wear pads PE are required for use on the duplex chain and accumulation roller chain conveyor media. The wear pad PE is not suitable for accumulation operation on flat-top chains ESD.

- ▶ Standard frame modules are used for self-assembly of workpiece pallets WT 2
- ▶ Corner modules with standard side lengths of 160 to 400 mm
- ▶ Frame extension module 320 mm
- ▶ Material:
 - Corner/extension module (PA) with PA (polyamide) wear pad or
 - Corner/extension module (PA) with PE (= polyethylene) wear pad
- ▶ Reinforced frame modules are required for total weights $m_G > 50$ kg AND for conveyor speeds $v_N > 12$ m/min
- ▶ Can be combined with workpiece pallet WT 2 carrying plates
- ▶ Suitable for use in an EPA

Workpiece pallet WT 2/H

Pick-up and transportation of workpieces in the transfer system TS 2plus.

Recommended accessories

- ▶ 2x Positioning bushing set WT 2/H (LE 2), see p. 2-40
Positioning bushings are required if a positioning unit PE 2/H is used

Scope of delivery

- ▶ Carrying plate
- ▶ Corner module
- ▶ Wear pads
- ▶ Damping elements

Ordering information

- ▶ Workpiece pallet for especially high maximum permitted total weight up to 240 kg (2 kg/cm length) in combination with accumulation roller chain conveyor medium
- ▶ Fully assembled or as a kit for self-assembly
- ▶ Wear pad PE for quiet operation and low wear
- ▶ Integrated stop damper, ensures quiet running onto other workpiece pallets
- ▶ 17 standard sizes
- ▶ For workpiece pallet dimensions
 $b_{WT} \times l_{WT} = 400 \times 400 \text{ mm}$ up to $1200 \times 1200 \text{ mm}$
- ▶ Special dimensions on request
- ▶ Universal aluminum carrying plate with two carrying plate thicknesses:
 $d = 12.70 \text{ mm}$
 $d = 19.05 \text{ mm}$
- ▶ Suitable for use in an EPA
- ▶ Material:
 - Corner module and slider with PE (= polyethylene) wear pad
 - Aluminum carrying plate (12.7 mm; 19.05 mm)

Condition on delivery

- ▶ Assembled (MT = 1)
- ▶ Kit, not assembled (MT = 0)

Components for workpiece pallets WT 2/H

To fulfill special needs, the workpiece pallets can also be individually configured in a design where the carrying plate is assembled by the customer. In addition to frame modules, various carrying plates, positioning bushings, and all the necessary fastening elements are available.

Workpiece pallet WT 2/H kit

- ▶ Suitable for aluminum carrying plates WT 2/H and high specific section loads
- ▶ Wear pad PE for quiet operation and low wear
- ▶ Suitable for accumulation roller chains

Carrying plates

- ▶ Aluminum carrying plates with a thickness of 12.70 mm or 19.05 mm are a light and rigid alternative for large workpiece pallets

Positioning bushings

- ▶ For defined pick-up of the workpiece pallet in the positioning units

Workpiece pallet WT 2/H kit

2-34

Carrying plate

2-36

Positioning bushing set WT 2/H

2-40

Workpiece pallet WT 2/H kit

- ▶ Workpiece pallet kit without carrying plate for self-assembly or for adaptation to specific customer requirements
- ▶ Wear pad PE for quiet operation and low wear
- ▶ Integrated stop damper, ensures quiet running onto other workpiece pallets
- ▶ 17 standard sizes
- ▶ For workpiece pallet dimensions
 $b_{WT} \times l_{WT} = 400 \times 400 \text{ mm}$ up to $1200 \times 1200 \text{ mm}$
- ▶ Special dimensions on request
- ▶ Suitable for use in an EPA
- ▶ Material: PE (= polyethylene) wear pad

Recommended accessories

- ▶ 2x positioning bushing sets WT 2/H (LE 2), see p. 2-40
Positioning bushings are required if a positioning unit PE 2/H is used

Scope of delivery

- ▶ Corner module
- ▶ Slider with wear pads PE
- ▶ Damping elements

Condition on delivery

- ▶ Parts kit without carrying plate
- ▶ Not assembled

Carrying plate

- ▶ Aluminum carrying plates for high loads with large workpiece pallets
- ▶ For workpiece pallet self-assembly for product support or for adaptation to specific customer requirements
- ▶ Completely drilled and ready for assembly
- ▶ 17 standard sizes
- ▶ Universal aluminum carrying plate with two carrying plate thicknesses:
 - d = 12.70 mm
 - d = 19.05 mm
- ▶ Can be combined with WT 2/H workpiece pallet mounting kit

Positioning bushing set WT 2/H

- ▶ For defined pick-up of the workpiece pallet in positioning units
- ▶ Material: Steel
- ▶ Can be combined with workpiece pallet WT 2/H carrying plates

Required accessories

- ▶ Positioning bushings are required if a positioning unit PE 2/H is used

Ordering information

Product description	Delivery unit	Material number
Positioning bushing set WT 2/H	2	3842531354

Technical data

Material number	3842531354
Weight	kg 0.6

Frame workpiece pallet WT 2/F

- ▶ Frame workpiece pallet, fully assembled or as a kit for self-assembly
- ▶ Low weight and high stability thanks to aluminum frame construction
- ▶ Especially suitable for low-cost transportation of large products
- ▶ Continuous standard grooves to easily fasten cross struts and workpiece supports
- ▶ Integrated positioning bushings
- ▶ Various wear pads for use on all conveyor media
- ▶ Wear pad PA (LS = 0) for use on belts, toothed belts, or flat-top chains
- ▶ Wear pad PE (LS = 1) for use on accumulation roller chains

Scope of delivery

- ▶ Frame modules
- ▶ Connection elements
- ▶ Positioning bushings

Condition on delivery

- ▶ Assembled (MT = 1)
- ▶ Kit, not assembled (MT = 0)

Frame workpiece pallets WT 2/F-H

2

- ▶ Frame workpiece pallet for especially high maximum permitted total weight up to 240 kg (2 kg/cm length) in combination with accumulation roller chain conveyor medium
- ▶ Fully assembled or unassembled as a kit
- ▶ Low weights and high stability thanks to aluminum frame construction
- ▶ Standard grooves to easily fasten cross struts and workpiece supports
- ▶ Wear pad PE for quiet operation and low wear
- ▶ Integrated stop damper, ensures quiet running onto other workpiece pallets
- ▶ For workpiece pallet dimensions $b_{WT} \times l_{WT} = 400 \times 400$ mm up to 1200×1200 mm
- ▶ Special dimensions on request
- ▶ Suitable for use in an EPA
- ▶ Material:
Frame module with PE (= polyethylene) wear pad

Pick-up and transportation of workpieces in the transfer system TS 2plus.

Recommended accessories

- ▶ 2x positioning bushing set WT 2/F-H (LE 2), see p. 2-46

Scope of delivery

- ▶ Corner module
- ▶ Wear pads
- ▶ Damping elements
- ▶ Frame modules
- ▶ Cover caps

Condition on delivery

- ▶ Assembled (MT = 1)
- ▶ Kit, not assembled (MT = 0)

Workpiece pallet WT 2/LS

2

- ▶ Suitable for belt, toothed belt, and flat-top chain
- ▶ Suitable for use in an EPA
- ▶ Integrated roller carrier with guide rollers
- ▶ Integrated feed magnet with magnetic protection plate
- ▶ Integrated measuring magnet
- ▶ Magnet stop protection
- ▶ Material:
 - Frame module with polyamide (PA) wear pad
 - Aluminum carrying plate (8 mm)

Notes:

- ▶ Observe the travel direction of the WT 2/LS on the linear section LS 2, shown by arrow on the carrying plate
- ▶ Observe the notes in the assembly instructions WB 2 workpiece pallet booster 3842562367:
 - Guidelines for processing the carrying plate
 - Warning notice "Strong magnetic field!"; remove magnetic protection plate for shielding the magnetic field only upon commissioning

Workpiece pallet WT 2/LS based on WT 2 with all functions of the WT 2 in 15 standard sizes.

The mobile data tags MDT 1/2K-H and MDT 21/28-L are

fastened to the roller carrier. Other data tags can be mounted analogously to WT 2.

Scope of delivery

- ▶ Carrying plate
- ▶ Frame modules
- ▶ Connection elements
- ▶ Positioning bushings
- ▶ Roller carrier with guide rollers
- ▶ Feed magnet with magnetic protection plate
- ▶ Measuring magnet
- ▶ Magnet stop protection

Condition on delivery

- ▶ Assembled, individually packed with magnetic protection plate

¹⁾ Nominal force refers to room temperature.

²⁾ Fz = 100 + maximum load - actual load

The process force Fz can be increased by using the maximum possible load as a process force.

Notice: Performance depends on the ambient temperature.

WT 2/LS overview

- A Rollers
- B Identification of travel direction on LS 2
- C Feed magnet
- D Measuring magnet
- E Magnetic protection plate

Notice:

Please note that the workpiece pallet WT 2/LS has a strong magnetic field and take appropriate precautions. Observe the corresponding notices in the assembly instructions.

- ▶ The magnetic protection plate must be placed immediately after the WT 2/LS is removed from the conveyor section
- ▶ Magnetic field < 6 mT at a distance of 20 mm from the top side of the WT
Please refer to the assembly instructions for details
- ▶ With electronic implants (pacemaker, pump, etc.), a minimum distance of 0.3 m from the magnets must be maintained

- ▶ Further information on assembly/disassembly, functions and settings can be found in the assembly instructions WB 2 workpiece pallet booster 3842562367

Dimensions

For size information for b_{WT} and l_{WT} , see page 2-48.

400	-	J	J	J
480	-	-	J	J
640	-	-	-	J

Use stop gate tunnels to stop the WT 2/LS in the transverse conveyor at the inside edge of the frame module

VE 2

Length of workpiece pallet l_{WT} (mm)	Width of workpiece pallet b_{WT} (mm)			
	160	240	320	400
160	K	K	-	-
240	J	J	J	-
320	J	J	J	J
400	-	J	J	J
480	-	-	J	J
640	-	-	-	J

- J No restrictions
- K A double stop gate combination is required for separation
- M Stop gate mounting on the side of the measuring magnet is not permissible

Double separation

- ▶ Double separation is required for safe accumulation separation with short WTs.
- ▶ With a double stop gate, two stop gates are used to separate the workpiece pallets. The first stop gate stops the WT inside, the second stop gate stops the WT outside.
- ▶ Double stop gates are used to protect the magnets

- ▶ Double separation is required for the following WTs: 160 x 160; 160 x 240; 160 x 320; 240 x 160
- ▶ With a width of 320 mm and 400 mm, no special measures are required. A double stop gate does not need to be used here

Installation of double stop gate

Workpiece pallet WT 2/LS combination options with components TS 2plus

Due to the strong magnets below the WT 2/LS, magnetically active parts must have a minimum distance from the magnets. Attached elements (feed magnet, measuring magnet and stopper) can represent an interfering contour for different components TS 2plus.

Some components TS 2plus can be used without any changes, others have been adapted to ensure that the WT 2/LS is used. However, there are also components that cannot be used.

Material numbers and parameters can be found in the relevant components.

- ▶ Components with toothed belt or belt can be used
- ▶ Components with accumulation roller chain cannot be used
- ▶ The curve KU 2/... for larger WTs can be used from the FPK construction kit

Components TS 2plus for workpiece pallets WT 2/LS

Longitudinal conveyor	
AS 2/B, UM 2/B, ST 2/B	● ³⁾
BS 2, BS 2/M-2, BS 2/K	●
LG 2/H from b = 400 mm	●

SZ 2...	●

The following components TS 2plus cannot be used:

- ▶ CU 2
- ▶ HQ 2/U-H, HQ 2/C-H
- ▶ PE 2/X, PE 2/XP, PE 2/XX, PE 2/H
- ▶ VE 2/X, VE 2/D-200, VE 2/D100-H, VE 2/D250-H, VE 2/RS-H
- ▶ VA 2/50 rev., VA 2/D-130, VA 2/D-250
- ▶ All components with accumulation roller chain and chain *Vplus*

¹⁾ These components are available in an adapted version (version LS). The version LS is specially designed for the WT 2/LS, but it can also be combined with the same components as your standard version.

²⁾ The WT 2/LS cannot be inserted into the transverse conveyor on these components.

³⁾ In combination with the WT 2/LS, the motor mounting in the middle (MA=M) is not permissible for these components TS2.

Longitudinal conveyor

Conveyor media selection

3-2

Conveyor media selection

Linear motor driven section

With the feed force generated by a linear motor drive, a workpiece pallet can be moved variably forward and backward within 0.3 s (workpiece carrier change time) between process stations.

The seamless transition from a toothed belt section to a linear section allows low cycle times and, with limited sections, high dynamics, flexibility and precision.

Belts, toothed belts, flat-top chains, and accumulation roller chains are available as conveyor media for longitudinal conveying.

Belts/toothed belts

All toothed belts and the belt are suitable for use in EPAs (ESD Protected Areas). The belt has been designed for section loads of up to 250 kg and is pretensioned with a special device and then bonded to form a continuous belt. It is mainly used in systems with light conveying loads and section lengths of over 2 m.

Belt sections with toothed belts are available for shorter sections. The workpiece pallet is conveyed on the back side, which has been reinforced with fabric. A change to the running direction (reversible operation) is also possible.

Flat-top chain

Plastic flat-top chains have wear-free polyamide caps on each chain link which reduce friction and help the system run more quietly. A marked cap is available for the chain joint. A design that is also flexible on the side enables use of the plastic flat-top chain in curves. It is mainly used in systems with medium conveying loads.

Accumulation roller chain

The roller elements of the accumulation roller chain allow the chain to lightly roll underneath the workpiece pallet when pallets accumulate. It is mainly used to convey heavy loads in rough environments. Both types of chains are closed using a chain lock to create an endless chain (1 chain lock each in scope of delivery).

Belt and toothed belt conveyor medium

The belt and toothed belt conveyor media are suitable for conveying small and medium-sized workpiece pallets in clean, dry environments. The high flexibility and flat design of the conveyor medium allow for narrow conveyor trenches between section profiles.

Whereas the belt is an especially economical conveyor medium, primarily utilized on longer section segments, the toothed belt is suitable for shorter section segments and/or driving neighboring modules without their own drives.

The conveyor media, or the modules equipped with these media, are used for assembly of lightweight products, e.g., electrical household appliances. Features such as a low risk of drawing-in and low profile construction height, as well as quiet operation, facilitate use at manual assembly stations. Specific section loads of up to 1 kg/cm are possible on workpiece pallets with wear pad PA.

Belt sections BS 2...

3-6

**Components for conveyor units
AS 2/..., UM 2/..., ST 2...**

3-18

Belt section BS 2/...

The belt section is a ready for operation conveyor section with own drive for the transportation of workpiece pallets in the longitudinal direction or for the transverse conveying of the workpiece pallet between parallel conveyor sections in connection with two lift transverse units HQ 2.

Recommended accessories

- ▶ Connection kit, see p. 9-21
- ▶ Leg sets SZ 2/..., see p. 6-4

Condition on delivery

- ▶ Assembled

- ▶ Ready for operation conveyor section with own drive
- ▶ Accumulation operation possible
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Reversible operation possible
- ▶ Drive side can be attached to the input of KE 2/O (not as cam drive)
- ▶ When mounted at the output of a curve, BS 2 can also serve as a cam drive. The required connection kit and drive set is contained in the scope of delivery of the curve
- ▶ Suitable for mounting between KE 2 and linear section LS 2
- ▶ BS 2 is suitable and recommended for workpiece pallets WT 2 and WT 2/LS in the longitudinal conveyor
- ▶ BS 2/LS is particularly suitable and recommended for workpiece pallets WT 2/LS in the transverse conveyor, e.g. for removal in a HQ 2
- ▶ Can be combined with WT 2, WT 2/E, WT 2/LS and WT 2/F with wear pad PA
- ▶ Motor mounting right, left or central
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Special models on request

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

- ▶ Functional operation conveyor section complete with drive
- ▶ Drive position freely selectable in longitudinal direction
- ▶ Accumulation operation possible
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Reversible operation possible
- ▶ With 1 or 2 large return heads, the BS 2/M-2 is also suitable for mounting on curve KE 2/O or HQ 2/O
- ▶ Suitable for mounting situations where large return heads or drive heads are required
- ▶ BS 2 is suitable and recommended for workpiece pallets WT 2 and WT 2/LS in the longitudinal conveyor
- ▶ BS 2/LS is particularly suitable and recommended for workpiece pallets WT 2/LS in the transverse conveyor, e.g. for removal in a HQ 2
- ▶ Can be combined with WT 2, WT 2/E, WT 2/LS and WT 2/F with wear pad PA
- ▶ Motor mounting right, left or central
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Special models on request

The belt section is a conveyor section that is ready for operation with own drive for the transportation of workpiece pallets. It is suitable for all installation situations in which the motor cannot be fitted to the end of the belt section.

The return units can be inserted at both ends of the belt section, allowing a greater variety of applications.

With 1 or 2 large return heads, the new modular unit BS 2/M-2 can now also be used to drive a KE 2/O or HQ 2/O. In addition, there is the option of whether or not a hexagonal shaft is integrated.

Recommended accessories

Belt section BS 2/S

- ▶ Segmented belt section with the possibility of up to 3 additional cuts in the longitudinal profile
- ▶ Connection with standard profile connectors
- ▶ This allows flexible individual parts of the belt section to be removed
- ▶ This also causes simpler handling and more efficient transportation of the belt sections
- ▶ Accumulation operation possible
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Reversible operation possible
- ▶ Can be combined with WT 2, WT 2/E, WT 2/F and WT 2/LS
- ▶ Motor mounting right, left or central (central from track width of 160 mm)
- ▶ Motor connection optionally with cable/plug (AT = S) or terminal box (AT = K)
- ▶ Special models on request

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The belt section is a ready for operation conveyor section with own drive for the transportation of workpiece pallets in the longitudinal direction or for the transverse conveying of the workpiece pallet between parallel conveyor sections in connection with two lift transverse units HQ 2.

Recommended accessories

Transmission drive

- ▶ Timing belt side drive for gear motors that must be constructed set lower so that they can be driven over
- ▶ Suitable for flange mounted gears, flange diameter 120 mm (B5 version with worm gear) and hollow shaft, diameter 20 mm
- ▶ Designed for Spiroplan right-angle gear motors SEW, WAF20, WAF30 or WAF37 and worm gear motors SAF37
- ▶ Reversible operation possible
- ▶ Suitable for mounting to belt section BS 2 and BS 2/M-2
- ▶ Maximum transferable torque (on the gear output): $m_{\max} = 12 \text{ Nm}$
- ▶ Only suspended mounting of the gear motor is permitted

For mounting larger third-party motors for the connection belt of higher drive torques (maximum section loads of the belt section must not be exceeded).

Required accessories

- ▶ Belt section BS 2 (see p. 3-6) or BS 2/M-2 (see p. 3-9)
- ▶ Gear motor
- ▶ Torque support (to be supplied by the operator)

Condition on delivery

- ▶ Unassembled in parts
- ▶ Bearing already press-fitted
- ▶ Incl. adapter set and additional hexagonal shaft

Conveyor units

Components for belt conveyor medium

A conveyor unit is a complete unit used for the linear conveying of workpiece pallets. It consists of:

- ▶ Drive module AS 2/B-..., see p. 3-20
- ▶ Return unit UM 2/B, see p. 3-26
- ▶ Section ST 2/..., see p. 3-29
- ▶ Leg sets SZ 2/..., see p. 6-4

The UM 2/B and AS 2/B-... may be set up right next to each other, which allows for conveyor unit combinations.

The drive module is designed for section loads up to $m_G = 150$ kg or up to $m_G = 250$ kg per conveyor unit.

Drive module AS 2/B...

Drive module AS 2/B-150

- ▶ Conveyor medium: Belt (suitable for use in an EPA)
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Centered motor mounting only possible in 0° and 90° position. For right or left motor mounting, the installation angle is optional
- ▶ Special models on request
- ▶ Accumulation operation possible

Notice: Can be combined with WT 2/LS workpiece pallet

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The drive module AS 2/B-... drives the conveyor medium belt in self-built conveyor units with lines, return unit and conveyor belt or serves as a transverse section.

Required accessories

- ▶ Roller track RB 2 track 3842532822 (see p. 3-28) with adjacent longitudinal sections and workpiece pallet lengths of < 320 mm
- ▶ Roller track set RB 2/UM 2 3842558657 (see p. 5-99) for use in transverse sections with adjacent longitudinal sections

Scope of delivery

- ▶ Drive module AS 2/B-150
- ▶ Includes fastening material to mount on the conveyor section ST 2/..., as well as to mount on an adjacent return unit

Condition on delivery

- ▶ Assembled

Belt GT 2

The belt used as a conveyor medium transports the workpiece pallets into the transfer system. The belts are pretensioned during installation and bonded to form a

continuous belt. A belt mounting tool kit is used for jointing, tensioning and bonding.

Required accessories

- ▶ Belt mounting tool kit, see p. 3-38
- ▶ Glue, see p. 3-38

Ordering information

Material specification	Polyamide (PA)	Polyamide (PA)
Length	l m	250
		1 ... 250

Dimensions

Calculating the required length of the conveyor medium

The required belt length is determined using the following formula.

Notice: A pretensioning factor F is required for the belt, see the "Pretensioning factor F for belts" overview.

$$l_B = ((2 \times l_s + l_{AS} + l_{UM}) \times F) + 60$$

l_B = Length of belt

l_s = Length of section

l_{AS} = Length of the conveyor medium at the drive module

l_{UM} = Length of the conveyor medium at the return unit

F = Pretensioning factor

Pretensioning factor F for belt

With AS 2/B-150 and $l_s \leq 4000$ mm, F = 0.98

With AS 2/B-150 and $l_s > 4000$ mm, F = 0.975

With AS 2/B-250, F = 0.965

Length of the conveyor medium for belt

l_{UM} = 660 mm

l_{AS} = 660 mm

Belt expansion

at $l_s \leq 4000$ mm, = 2 %

at $l_s > 4000$ mm = 2.5 %

at AS 2/B-250 = 3.5 %

Belt mounting tool, glue

- ▶ Skiving device for reducing belts at connection points
- ▶ Heat press to glue the belt ends thermally
- ▶ Belt pre-tensioning device
- ▶ Adhesive for the bonding of belts, only for commercial use, observe safety instructions

The belt mounting tool is used to join the ends of belts for section lengths $l > 2000$ mm.

Required accessories

- ▶ Glue, see p. 3-38

Recommended accessories

- ▶ Second heat press for the simultaneous bonding of adjacent belts

Scope of delivery

- ▶ Belt mounting tool kit:
 - Heat press
 - Skiving device with abrasive belt
 - Mounting bracket
 - Brush
 - Pre-tensioning device
 - Belt tensioner

Flat-top chain conveyor medium

The flat-top chain conveys primarily medium and large-sized workpiece pallets in environments with low to moderate production emissions.

The flexibility of the plastic flat-top chain permits continuous drive combinations with curve arcs (see p. 4-32).

- ▶ Wear pad PA on the workpiece pallets are recommended in the combination with the plastic flat-top chain. In the standard design with plastic glide profiles in the section profile, this permits specific section loads of up to 1 kg/cm, whereas the optionally available version with steel glide profiles can tolerate section loads of up to 1.5 kg/cm.

A particularly robust combination can be created from the HD profiles in combination with steel glide profiles and steel guide profile.

Reversible operation is not permitted with the flat-top chain conveyor medium.

If flat-top chains are used, the use of the decentralized automatic lubrication unit LU 2 or central automatic lubrication unit LU 2/P is recommended.

**Single-track section CS/C,
belt sections BS 2 C...**

3-42

**Components for conveyor units
AS 2/..., UM 2/..., ST 2...**

3-56

Single-track section CS/C

- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Motor mounting right or left
- ▶ Conveyor medium: Plastic flat-top chain (with KA = A suitable for use in an EPA)
- ▶ Special models on request
- ▶ Reversible operation is possible for $l \leq 2000$ mm and environments without small parts

The single-track section CS/C is a conveyor section that is ready for operation with own drive for the transportation of

small parts for mounting and assembly workstations.

Recommended accessories

- ▶ Connection kits, see p. 9-21
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Decentralized automatic lubrication unit LU 2, see p. 9-5 or central automatic lubrication unit LU 2/P, see p. 9-7

Condition on delivery

- ▶ Assembled

Belt section BS 2/C-100

The belt section is a ready for operation conveyor section with own drive for the transportation of workpiece pallets in the longitudinal direction or for the transverse conveying of the workpiece pallet between parallel conveyor sections in connection with two lift transverse units HQ 2.

Recommended accessories

- ▶ Connection kits, see p. 9-21
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Decentralized automatic lubrication unit LU 2, see p. 9-5 or central automatic lubrication unit LU 2/P, see p. 9-7

Condition on delivery

- ▶ Assembled

- ▶ Functional operation conveyor section complete with drive
- ▶ Longitudinal conveying of the workpiece pallet on conveyor sections of up to 6000 mm
- ▶ Transverse conveyor between parallel conveyor sections
- ▶ Conveyor medium: plastic flat-top chain (with KA = A suitable for use in an EPA)
- ▶ Can be combined with WT 2, WT 2/E, WT 2/F with wear pad PA, WT 2/LS
- ▶ Motor mounting right, left or central (central from track width of 240 mm)
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Special models on request
- ▶ Reversible operation not permitted
- ▶ Use with medium accumulation loads

Notice: The WT 2/LS can be used for longitudinal conveyors with this component.

Cross-traversing and motor mounting in the center (MA = M) is not possible.

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

Conveyor units

Components for conveyor medium flat-top chain

A conveyor unit is a complete unit used for the linear conveying of workpiece pallets. It consists of:

- ▶ Drive module AS 2/C, see p. 3-58
- ▶ Return unit UM 2/C, see p. 3-70
- ▶ Section ST 2/..., see p. 3-74
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Cross connector QV 2, see p. 9-17
- ▶ Flat-top chain, see p. 3-88

The UM 2/C and AS 2/C-... may be set up right next to each other, which allows for conveyor unit combinations.

Drive modules for section loads up to $m_G = 100$ kg; 250 kg; 400 kg; or up to $m_G = 700$ kg per conveyor unit.

Return unit UM 2/C-60	3842528802

Technical data

Material number	3842528802	
ESD	Yes	
Required conveyor medium length ¹⁾	l_{UM} mm	150

¹⁾ Formula for calculating the conveyor medium, see p. 3-89

Dimensions

Return unit UM 2/C-170

- ▶ Conveyor medium: Flat-top chain (suitable for use in an EPA)
- ▶ For use in conjunction with all drive modules AS 2/C-...
- ▶ Version with pinion for return unit
- ▶ Recommended for sections of $l > 6000$ mm

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The return unit is used for constructing conveyor units. It guides the conveyor medium at the end of the conveyor unit back to the drive module.

Required accessories

- ▶ Connection kits, see p. 9-21

Scope of delivery

- ▶ One pair of return heads
- ▶ Incl. all fastening material to mount on the conveyor section ST 2/...

Condition on delivery

- ▶ Assembled

Section, section profiles

Sections can be individually configured for special requirements by selecting various section, glide, and guide profiles.

Depending on the load spectrum of the conveyor medium, stainless steel or plastic glide profiles can be inserted in the section profile. Use of steel glide profiles increases resistance to wear and temperature. This opens up new areas of application for the TS 2plus.

The proven profiles SP 2/C-100 are primarily suitable for medium loads in simple system layouts.

Especially suited for high strains and loads, the new, sturdy section profiles SP 2/C-H have been developed for flat-top chains. In addition to a more robust profile cross section and improvements to details (integrated cable duct), the use of stainless steel in the guide profile enhances the system. An adapter plate not only enables visually attractive mounting of the section profiles SP 2/C-H on the drive modules in the TS 2plus, it also securely keeps the glide profiles (sliding guides) from shifting.

Section ST 2/C-100

3

- ▶ For conveyor unit self-assembly
- ▶ For use in conjunction with all drive modules AS 2/C-... and return units UM 2/C-...
- ▶ Conveyor medium: Plastic flat-top chain
- ▶ Plastic glide profile GP 2
- ▶ Pre-assembled unit for quick setup

Notice: The WT 2/LS can be used for longitudinal conveyors with this component.
It is not possible to cross over.

The section is used to construct conveyor units with plastic flat-top chains in connection with the drive modules AS 2/C-...and return units UM 2/C-....

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Profile connector, see p. 9-16
- ▶ Cross connector, see p. 9-17

Scope of delivery

- ▶ 2x section profiles SP 2/C with assembled guide profiles FP 2 and glide profiles GP 2

Condition on delivery

- ▶ Assembled

3

- ▶ For conveyor unit self-assembly
- ▶ For use in conjunction with all drive modules AS 2/C-... and return units UM 2/C-...
- ▶ Section profile (50 mm wide) in an especially sturdy version for section loads of up to 30 % higher
- ▶ Conveyor medium: Plastic flat-top chain
- ▶ Optional steel or plastic glide profiles GP 2

Notice: The WT 2/LS can be used for longitudinal conveyors with this component.

It is not possible to cross over.

The section is used to construct heavy-duty conveyor units with plastic flat-top chains in connection with the

drive modules AS 2/C-... and return units UM 2/C-...

Required accessories

- ▶ Adapter plate kit ST 2/C-H, see p. 3-85
- ▶ If GP = 0, then adapter plates are to be fitted between each section joint.

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Profile connector, see p. 9-16
- ▶ Cross connector, see p. 9-17
- ▶ Cover rail for cable duct, see p. 9-20

Scope of delivery

- ▶ 2x section profile SP 2/C-H with assembled guide profiles FP 2/H-ST and glide profiles GP 2/H-...

Length	l mm 12000	12000	

Dimensions

The required chain length is determined using the following formula.

$$l_c = 2 \times l_s + l_{AS} + l_{UM}$$

l_c = Length of flat-top chain

l_s = Length of the section profile

l_{AS} = Length of the conveyor medium in the drive module

l_{UM} = Length of the conveyor medium at the return unit

Length of the conveyor medium for flat-top chains

$l_{UM\ 2/C-170} = 310\text{ mm}$

$l_{UM\ 2/C-60} = 150\text{ mm}$

$l_{AS\ 2/C-100} = 475\text{ mm}$

$l_{AS\ 2/C-250} = 475\text{ mm}$

$l_{AS\ 2/C-400} = 625\text{ mm}$

$l_{AS\ 2/C-700} = 625\text{ mm}$

Accumulation roller chain conveyor medium

The accumulation roller chain is suitable for large, heavy workpiece pallets. Stress occurring due to media such as test oils or production emissions does not affect functional reliability.

The accumulation rollers do not only reduce the accumulation pressure on stop gates, but also enable a quick return to the transport speed via acceleration elements following work at a processing station.

When combined with wear pads PE on the workpiece pallets, the version with plastic accumulation roller chain and steel glide profiles allows 1.5 kg/cm and the version with steel accumulation roller chain and steel glide profiles allows 2 kg/cm specific section load.

The new profiles HD equipped with steel glide profiles and steel guide profile provide a particularly sturdy, low-maintenance combination.

Belt sections BS 2/R...

3-94

**Components for conveyor units
AS 2/..., UM 2/..., ST 2...**

3-104

3

Belt section BS 2/R-300

The belt section is a ready for operation conveyor section with own drive for the transportation of workpiece pallets in the longitudinal direction or for the transverse conveying of the workpiece pallet between parallel conveyor sections in connection with two lift transverse units HQ 2.

Recommended accessories

- ▶ Connection kits, see p. 9-21
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Decentralized automatic lubrication unit LU 2, see p. 9-5 or central automatic lubrication unit LU 2/P, see p. 9-7

Condition on delivery

- ▶ Assembled

- ▶ Conveyor section ready to use
- ▶ Conveyor medium: Accumulation roller chain (suitable for use in an EPA)
- ▶ Reversible operation possible for $l \leq 2000$ mm and accumulation roller chains without small parts protection
- ▶ Chain tensioner for reversible operation contained in drive head
- ▶ Motor mounting right, left or central (central from track width of 240 mm)
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Special models on request

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

Notice: With short, light workpiece pallets ($l_{WT} = 160, 240$), it may be necessary to ensure that conveyor trenches are traversable by installing the included acceleration element. When doing so, note the following:
Avoid accumulation above the acceleration element.
Accumulation above the acceleration element causes severe roller wear and shortens the service life of the chain.

Conveyor units

Accumulation roller chain conveyor medium

A conveyor unit is a complete unit used for the linear conveying of workpiece pallets. It consists of:

- ▶ Drive module AS 2/R, see p. 3-106
- ▶ Return unit UM 2/R, see p. 3-118
- ▶ Sections ST 2/R..., see p. 3-122
- ▶ Leg sets SZ 2/..., see p. 6-2

The UM 2/R and AS 2/R may be set up right next to each other, which allows for conveyor unit combinations.

Drive modules for section loads up to $m_G = 300$ kg; 700 kg; 1200 kg, or up to $m_G = 2200$ kg per conveyor unit.

Section, section profiles

Sections can be individually configured for special requirements by selecting various section, glide, and guide profiles.

Depending on the load spectrum of the conveyor medium, stainless steel glide profiles can be inserted in the section profile. Use of steel glide profiles increases resistance to wear and temperature. This opens up new areas of application for the TS 2plus.

The proven profiles SP 2/R-100 are primarily suitable for medium to high loads in simple system layouts.

Especially suited for high strains and loads, the new, sturdy section profiles SP 2/R-H have been developed for accumulation roller chains. In addition to a more robust profile cross section and improvements to details (integrated cable duct), the use of stainless steel in the guide profile enhances the system. An adapter plate not only enables visually attractive mounting of the section profiles SP 2/R-H with drive modules in the TS 2plus, it also securely keeps the glide profiles (sliding guides) from shifting.

Section ST 2/R-100

- ▶ For conveyor unit self-assembly for higher section loads
- ▶ For use in conjunction with drive modules AS 2/R..., return units UM 2/R-..., and steel glide profiles

3

The section is used for the construction of conveyor units in conjunction with the drive modules AS 2/R and the return units UM 2/R... .

Accumulation roller chain with PA or steel accumulation roller chain lock for accumulation roller chain

3

- ▶ Conveyor medium for the workpiece pallets
- ▶ For conveyor unit self-assembly
- ▶ For use in conjunction with conveyor units ST 2/R and ST 2/R-H
- ▶ Delivered in units of 12,000 mm. Lengths of l > 12,000 mm can be produced by connecting several accumulation roller chains using chain locks
- ▶ Chains are available with small parts protection (= filler pieces in the accumulation roller chain prevent small parts from pinching)

Notice: Reversible operation is not possible in conjunction with small parts protection.

- ▶ Chain lock for locking the accumulation roller chain after insertion in conveyor section element
- ▶ Chain lock is suitable for all accumulation roller chains except the accumulation roller chain *Vplus*

Scope of delivery

- ▶ Units up to 12000 mm, incl. 1x chain lock

- 1 Accumulation roller chain without small parts protection
- 2 Accumulation roller chain with small parts protection

Dimensions

The required chain length is determined using the following formula.

$$l_R = 2 \times l_S + l_{AS} + l_{UM}$$

l_R = Length of the accumulation roller chain

l_S = Length of the section profile

l_{AS} = Length of the conveyor medium in the drive module

l_{UM} = Length of the conveyor medium at the return unit

Length of the conveyor medium for accumulation roller chain

$l_{UM\ 2/C-170}$ = 310 mm

$l_{UM\ 2/C-60}$ = 150 mm

$l_{AS\ 2/R-300}$ = 475 mm

$l_{AS\ 2/R-700}$ = 475 mm

$l_{AS\ 2/R-1200}$ = 625 mm

$l_{AS\ 2/R-2200}$ = 625 mm

Acceleration element

3

- ▶ For accelerated transport of a workpiece pallet to a stop gate
- ▶ The acceleration element is used in conjunction with the accumulation roller chain conveyor medium with steel rollers
- ▶ Accumulation operation not permitted
- ▶ Installation in sections after the stop gate
- ▶ Suitable for retrofitting

The support wheels of the chain element are lifted and roll frictionally engaged between the acceleration element and the workpiece pallet with a peripheral speed of $v_U = 2 \times v_N$.

This may be limited in oily environments.

Condition on delivery

- ▶ Not assembled

Accumulation roller chain *Vplus* conveyor medium

Accumulation roller chain *Vplus* – transport speed over distance

v_N Nominal speed
 v_T Max. transport speed

With the accumulation roller chain *Vplus*, the workpiece pallet attains transport speeds to the factor of 2.5 higher than the nominal chain speed.

Smooth running and less wear can thus be achieved by using drives with lower chain speeds with the accumulation roller chain *Vplus*.

Another benefit of the accumulation roller chain *Vplus* is the acceleration effect: after each processing station, the transport speed is picked up quickly without requiring any additional internal elements.

As a rule, dampened stop gates and dampers are recommended.

If transport speeds over 18 m/min are to be attained with the chain *Vplus*, the resulting higher dynamic loads on the entire system must be taken into account. Please contact your Rexroth specialist if in any doubt.

Workpiece pallets with wear pad PE must be used on the accumulation roller chain *Vplus*. The maximum permissible section load is 1.5 kg/cm.

Vplus 3-142 planning advice

Planning advice *Vplus*

The accumulation roller chain *Vplus* can mathematically reach a transport speed that is 2.5 times the nominal speed of the conveyor medium.

In practice:

- The weight of the workpiece pallet
- The lubrication and wear of the chain
- The length of the acceleration section

Can cause transport speeds that are typically up to 2.5 times the nominal speed of the conveyor medium.

The system must be adjusted to the significantly higher kinetic energy of the workpiece pallet:

- Dampers and dampened stop gates must be designed for the mathematical transport speed.
- Before entering a curve, ensure that the transport speed is max. 18 m/min.

Belt sections BS 2/R-V...

3-144

**Components for conveyor units
AS 2/..., UM 2/..., ST 2...**

3-148

Belt section BS 2/R-V-1200

- ▶ Operational conveyor section complete with drive for high workpiece pallet speeds
- ▶ Sturdy version for especially heavy-duty systems
- ▶ Conveyor medium: Accumulation roller chain *Vplus* (suitable for use in an EPA)
- ▶ Reversible operation possible for $l \leq 2000$ mm and accumulation roller chains without small parts protection
- ▶ Motor mounting right, left or central
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Special models on request

Notice: On the accumulation roller chain *Vplus*, the workpiece pallet attains a speed up to the factor of 2.5 higher than that of the chain. Special measures must therefore be observed for chain speeds > 9 m/min!

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The belt section is a ready for operation conveyor section with own drive for the transportation of workpiece pallets in the longitudinal direction or for the transverse conveying of the workpiece pallet between parallel conveyor sections in connection with two lift transverse units HQ 2.

Recommended accessories

Conveyor units

Accumulation roller chain *Vplus* conveyor medium

A conveyor unit is a complete unit used for the linear conveying of workpiece pallets. It consists of:

- ▶ Drive module AS 2/R-V, see p. 3-150
- ▶ Return unit UM 2/R-V, see p. 3-156
- ▶ Sections ST 2/R-V..., see p. 3-158
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Cross connector QV 2..., see p. 9-17
- ▶ Accumulation roller chain *Vplus*, see p. 3-141

The UM 2/R-V and AS 2/R-V may be set up right next to each other, which allows for conveyor unit combinations.

The drive modules are designed for section loads up to $m_a = 2200$ kg per conveyor unit.

Notice: On the accumulation roller chain *Vplus*, the workpiece pallet attains a speed up to the factor of 2.5 higher than that of the chain. Special measures must therefore be observed for chain speeds > 9 m/min!

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The drive module AS 2/R-V-1200 drives the conveyor medium accumulation roller chain *Vplus* in self-built conveyor units with sections, return units and accumulation roller chains *Vplus*.

Recommended accessories

- ▶ Decentralized automatic lubrication unit LU 2, see p. 9-5 or central automatic lubrication unit LU 2/P, see p. 9-7

Condition on delivery

- ▶ Assembled

Return unit UM 2/R-V-170

- ▶ Conveyor medium: Accumulation roller chain *Vplus* (suitable for use in an EPA)
- ▶ For use with all drive modules AS 2/R-V
- ▶ Version with pinion for return unit
- ▶ Reversible operation possible

Notice: On the accumulation roller chain *Vplus*, the workpiece pallet attains a speed up to the factor of 2.5 higher than that of the chain. Special measures must therefore be observed for chain speeds > 9 m/min!

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

The return unit is used for constructing conveyor units. It guides the conveyor medium at the end of the conveyor unit back to the drive module.

Scope of delivery

- ▶ One pair of return heads
- ▶ Incl. all fastening material to mount on the section ST 2/R-V...

Condition on delivery

- ▶ Assembled

Accumulation roller chain Vplus

Chain lock for accumulation roller chain Vplus

- ▶ Conveyor medium for the workpiece pallets in the system TS 2plus
- ▶ For conveyor unit self-assembly
- ▶ Can be combined with conveyor units ST 2/R-V and ST 2/R-H
- ▶ Delivered in units of 12,000 mm. Lengths of $l > 12,000$ mm can be produced by connecting several accumulation roller chains using chain locks
- ▶ Chains are available with small parts protection (= filler pieces in the accumulation roller chain Vplus prevent small parts from pinching)

Notice: Reversible operation is not possible in conjunction with small parts protection.

- ▶ Chain lock to close the accumulation roller chain Vplus after insertion in conveyor section element

Notice: On the accumulation roller chain Vplus, the workpiece pallet attains a speed up to the factor of 2.5 higher than that of the chain. Special measures must therefore be observed for chain speeds > 9 m/min!

Scope of delivery of accumulation roller chain Vplus:

- ▶ Units up to 12000 mm, incl. 1x chain lock

Material specification	Rollers: Steel	Rollers: Steel Small parts protection: PA 12 (suitable for use in an EPA)	Chain lock: Steel
Length	l mm 12000	12000	

- 1 Accumulation roller chain with steel accumulation rollers
- 2 Accumulation roller chain with steel accumulation rollers and small parts protection

Dimensions

The required chain length is determined using the following formula.

$$l_R = 2 \times l_S + l_{AS} + l_{UM}$$

- l_R = Length of the accumulation roller chain
- l_S = Length of the section profile
- l_{AS} = Length of the conveyor medium in the drive module
- l_{UM} = Length of the conveyor medium at the return unit

Length of the conveyor medium for accumulation roller chain

- $l_{UM\ 2/C-170} = 310\text{ mm}$
- $l_{UM\ 2/C-60} = 150\text{ mm}$
- $l_{AS} = 625\text{ mm}$

Disassembly tool for accumulation roller chain *Vplus*

- ▶ For disassembly of accumulation roller chains *Vplus*
- ▶ Makes it easier to open and disassemble the accumulation roller chain *Vplus*
- ▶ Turning the thread mandrel pushes out a chain rivet and the chain can be removed

3

Condition on delivery

- ▶ Assembled

Linear section LS 2

- ▶ The linear section LS 2 is a high-speed section driven by linear motors, fully assembled including guides for workpiece pallets WT 2/LS
- ▶ For the design of a hybrid system by integrating the section LS 2 driven by linear motors in layouts of TS 2plus systems
- ▶ Fast WT changeover times and thus reduced cycle times
- ▶ Positioning without additional indexing
- ▶ Transition to linear motor range "on the fly"
- ▶ Impact-free stopping for gentle transport of sensitive products
- ▶ Independent control of the workpiece pallets WT 2/LS with various motion profiles, also reversing

Notice: Positioning of WTs in the area of the drive heads/return heads is not permitted.

Notes when using the workpiece pallet WT 2/LS in conjunction with standard components TS 2plus:

- It is possible to use the toothed belt, belt, and FPK conveyor media for curves
- Due to the strong magnets below the WT 2/LS, magnetically active parts must have a minimum distance of 30 mm from the magnets. Please also note that the attached elements (feed magnet, measuring magnet and stopper) represent an interfering contour for different components TS 2plus

- Some components TS 2plus have been adapted to enable the use of the WT 2/LS. Material numbers and parameters can be found in the relevant components/standard components. On page 2-62 you will find an overview of the components TS 2plus suitable for the TS 2 Booster.

Please note that the linear path guide must be lubricated on both sides, for this the lubrication LU 2/LS for linear path LS 2 with adapter set is required (see p. 9-15).

Notice:

Please note that the workpiece pallet WT 2/LS has a strong magnetic field and take appropriate precautions. Observe the corresponding information in the assembly instructions.

Scope of delivery

- ▶ Conveyor section LS 2:
 - Guide with fastening elements (C)
 - Holder for linear motor
 - Linear motor (A)
 - Measuring system (B)

Condition on delivery

- ▶ Assembled

Required accessories

- ▶ Workpiece pallet WT 2/LS, see p. 2-47
- ▶ Motor cable, see p. 3-179
- ▶ Sensor cable, see p. 3-179

Recommended accessories

- ▶ Leg set SZ 2/LS END/MID, see p. 6-26
- ▶ Longitudinal connector LV 2, see p. 6-29
- ▶ 2x lubrication unit LU 2/LS, see p. 9-15,
 2x grease cartridge LU 2/LS, see p. 9-15
- ▶ Adjustment set LS 2, see p. 3-178
- ▶ Adjustment set BS 2 - LS 2, see p. 3-178

¹⁾ Mixed equipment = motor 306-3 and 306-1
Specification of the desired motor type per position
(see example mixed equipment)

²⁾ Other lengths upon request

Example of mixed equipment

A linear section is made up of linear motors.
A distinction is made between three motor types.

Depending on the track width (= WT width),
the following section configurations are recommended.

Motor type	Length (mm)	Number of independent segments
306-1	306	1
306-3	306	3
306-1 in double track	306	1

Track width	Motor type 306-1	Motor type 306-3	Motor type 306-1 and -3	306-1 in double track
160	x	x	x	
240	x	x	x	
320	x	x	x	
400				x

3

MC = 2: Mixed equipment:
Motors with 1 segment and motors with 3 segments are installed together in the section.

MC = 0/1: Sorted equipment:
Either only motors with 1 segment or with 3 segments are installed in the section.

Positioning time diagram

The following diagrams show the achievable positioning times depending on the travel distance and load.

The diagram values were determined under the following conditions:

- ▶ Jerk = unlimited
- ▶ Setting time = 30 ms
- ▶ With maximum dynamics (acceleration)

Notice:

Depending on the application, the positioning times depend on the following:

Tuning, standstill limit, PLC cycle time, etc.

Application-specific load cycle must be thermally checked

Positioning time diagram 160 x 160

PZ = positioning time in ms
VD = travel distance in mm

Positioning time diagram 160 x 240

Combination options of LS 2 and WT 2/LS with the following components TS 2plus:

Note on combination with linear section LS 2:

- ▶ Before and after the linear section LS 2, a belt section with a small return head and a minimum length of one WT must be installed. => BS 2 or BS 2/M-2

Notes on the combination option of the workpiece pallet WT 2/LS:

- ▶ Components with toothed belt or belt can be used without any problems
- ▶ Components with roller chain cannot be used
- ▶ The curve KU 2/... and BS 2/C... for larger WTs can be used from the flat-top chain construction kit
- ▶ On components with flat-top chain, the WT 2/LS cannot be removed from the transverse conveyor

Workpiece pallet WT 2/LS combination matrix with components TS 2plus, see page 2-62

Dimensions
Single track

- 1) Number of 306 motors
- 2) 1/2 bridge, bridge = 20 mm
- 3) Safety clearance

- 4) Overlap with section TS 2
- 5) Cover cap

Double track (only for $b_{WT} = 400$ mm)
Installation situation: Clear dimension between belt sections BS 2

- 1) Number of 306 motors
- 2) 1/2 bridge, bridge = 20 mm
- 3) Safety clearance

- 4) Overlap with section TS 2
- 5) Cover cap

Transition of conveyor section LS 2 and BS 2

Total length of linear section LS 2 with check-in and check-out section on the belt section BS 2

Height adjustment between leg set SZ 2/LS END / belt section BS 2 and linear section LS 2

The leg set SZ 2/LS END, the belt section BS 2 and the linear section LS 2 must be adjusted to the same height/orientation so that the curve is not offset.

Observe the minimum length of the belt section BS 2 which connects to the linear section LS 2:

Length of workpiece pallet l_{WP} (mm)	Minimum length of belt section l_{min} (mm)
160	310
240	320
320	400
400	480
480	560
640	720

3

Notice: Workpiece pallet centering from a track width of $b \geq 240$ mm is required.

Adjustment set LS 2

- ▶ For motor alignment and height adjustment

The adjustment set LS 2 is a tool for adjusting the motors in a linear section. 2 adjustment sets are required respectively.

Scope of delivery

- ▶ Adjustment set incl. holding body, centering piece, tightening spindle and fastening material

Ordering information

Product description	Material number
Adjustment set LS 2	3842562442

Adjustment set BS 2 – LS 2

- ▶ Used for fine adjustment of the adjacent belt sections BS 2 to LS 2

Notice:

The adjustment set BS 2 – LS 2 is included in the scope of delivery of the leg set SZ 2/END

The adjustment set BS 2 – LS 2 is required if the linear section is not installed on standard leg sets SZ 2/LS END.

Scope of delivery

- ▶ Set containing 2x adjustment set

Ordering information

Lift gate LG 2/H

- ▶ Can be used for belt sections BS 2, BS 2/C-100, BS 2/R-300 and for combinations of section ST 2/C-H (ST 2/R-H), drive AS 2/C-100 (AS 2/R-300) and return unit UM 2/C-60 (UM 2/R-60)
- ▶ From width $b = 240$ mm up to $b = 1200$ mm
- ▶ For passage width (A) 600 ... 1800 mm
- ▶ In open position (85°), locked
- ▶ Mechanical unlocking, optionally with pneumatic unlocking (kit PN)
- ▶ Safety switch in off position
- ▶ Can be used as transverse section

Notice:

- ▶ The length of the belt section (l_{BS}) is the passage width plus 500 mm
- ▶ The total required space of the LG 2/H is the passage width plus 535 mm
- ▶ Can be used with WT 2/LS at $b \geq 400$ mm and with all conveyor media except accumulation roller chain

Required accessories

- ▶ 1x belt section BS 2, see p. 3-6, or conveyor unit
- ▶ 2x leg set SZ 2, see p. 6-4
- ▶ 2x 4 strut profiles 45x60, see p. 3-188
- ▶ 16x bracket 45x45, see p. 3-188
- ▶ 2x foundation bracket, see p. 3-187
- ▶ Extension cable for safety switch

Recommended accessories

- ▶ Mounting kit PN, see p. 3-188

Scope of delivery

- ▶ Mounting kit with gas pressure springs, attachment kit, locking and safety switch

Condition on delivery

- ▶ Not assembled

The lift gate LG 2/H provides access or passage to the inner spaces of a belt section (BS). Manually tilting the belt section can open it from 0° to 85° or close it from 85° to 0°.

The effort required to do this is reduced with the aid of a gas pressure spring.

Overall width of the different lift gate assembly variants

Lift gate interfering contours

The following applies to the BS 2: When MA = M and b = 160 mm, the max. section load is only 30 kg

The total width results from the belt section width (b), the motor width (M) and other interfering contours (e.g. locking bolts for unlocking, etc.).

The requirements for other interfering contours are specified in the dimension drawings on the left.

In addition, the workpiece pallet width need not be taken into account.

Overall width/interfering contours

Belt section	M (mm)
B BS 2	154.0
BS 2/C-100	158.5
BS 2/R-300	158.5
ST 2/C-H	158.5
ST 2/R-H	158.5
C BS 2	154.0
BS 2/C-100	158.5
BS 2/R-300	158.5
ST 2/C-H	158.5
ST 2/R-H	158.5

Interfering contours A

If both plates are mounted outside of the belt section, the minimum width is b = 240 mm.

Interfering contours B

If both plates are mounted in the center of the belt section, the minimum width is b = 320 mm.

For mounting a locking bolt (not included) or mounting the PN locking mechanism, b = 320 mm.

Interfering contours C

If one plate is mounted in outside or inside of the belt section, the minimum width is b = 240 mm.

Selection of the mounting kit LG 2/H for the belt section type

- ▶ 1. Select the appropriate table for your belt section type
- ▶ 2. Determine the mounting kit LG 2/H reference number, which can be worked out from the workpiece pallet width b_{WT} and the feed width ($A = l_{BS} - 500$)

- ▶ 3. Use this reference number from the "mounting kit LG 2/H" table to identify the correct mounting kit (see p. 3-26)

Notice:

- ▶ The length of the belt section (l_{BS}) is the passage width plus 500 mm
- ▶ The total required space of the LG 2/H is the passage width plus 535 mm

BS 2

Mounting kit LG 2/H

- Determine the mounting kit LG 2/H reference number using the tables and the description "Selection of the mounting kit LG 2/H for the belt section type" on page 3-184f.

The reference number is also the mounting kit number. For example, if the reference number is 2, the mounting kit number is equal to 2.

Minimum length of the leg connection:

Minimum length B/C (mm)	Connection
145 ¹⁾	BS 2 return unit
175 ¹⁾	UM 2/C-60, UM 2/R-60
245	BS 2 drive
285	AS 2/C-100, AS 2/C-250, AS 2/R-300, AS 2/R-700, UM 2/C-170, UM 2/R-170
395	AS 2/C-400, AS 2/C-700, AS 2/R-1200, AS 2/R-220

¹⁾ Optimum leg connection for ideal support: 220 mm

Required accessories:

- 1x belt section BS 2, see p. 3-6, or conveyor unit
- 2x leg set SZ 2, see p. 6-8
- 2x 4 strut profiles 45x60, see p. 3-188
- 16x bracket 45x45, see p. 3-188
- 2x foundation bracket, see p. 3-187

Recommended accessories:

- Kit PN for unlocking in the top end position, see p. 3-188

Belt section with $l = A + 500$

Select the length (l) of the belt section (BS).

$l = A + 500$ mm, according to the ambient system:

- ▶ BS 2, see p. 3-6
- ▶ BS 2/C-100, see p. 3-45
- ▶ BS 2/R-300 plastic chain and steel chain, see p. 3-94
- ▶ Conveyor unit: ST 2/R-H (see p. 3-125), AS 2/R-300 (see p. 3-106), UM 2/R-60 (see p. 3-118)
- ▶ Conveyor unit: ST 2/C-H (see p. 3-77), AS 2/C-100 (see p. 3-58), UM 2/C-60 (see p. 3-70)

To construct a lift gate, you need:

- one leg set SZ 2 (3842996320) with AO = profile height of a BS 2
- one leg set SZ 2 with parameters, see table below:
AO = 60 mm and leg set width b_{sz}

BS 2/...	Leg sets SZ 2 ¹⁾	Material number
A $b \geq 160$, MA = M	$b_{sz}^3 = b^4 + 120$, AO ²⁾ = 60 mm	3842996320
B $b \geq 320$, MA = L; R	$b_{sz}^3 = b^4 - 120$, AO ²⁾ = 60 mm	3842996320
C $b = 240$ MA = L; R	$b = b^4$ AO ²⁾ = 60 mm	3842996320

¹⁾ See also p. 6-2

²⁾ AO = installation location

³⁾ b_{sz} = width b for leg

⁴⁾ b = width of belt section

See also p. 3-183:

for **A**: If both plates are mounted outside of the belt section

for **B**: If both plates are mounted in the middle of the belt section

for **C**: If one plate is mounted outside or inside the belt section

Curves and rotary units

Selection of curves

4-2

Selection of rotary units

4-40

Selection of curves and rotary units

CURVES

Curves are used to change the running direction of a workpiece pallet and to keep the orientation of the parts traveling (the front is always the front). The pneumatic and electrical installation and control effort for these modular units is minimal.

ROTARY UNITS

Rotary units are used for horizontal rotation and transportation of workpiece pallets. Rotating is possible in the narrowest space, while the part orientation is maintained (the front is always the front).

It is possible to rotate the workpiece pallet horizontally by 90°, 180° or 270°.

Curves

4-4

Rotary units

4-40

4

Curves

The following products are available for configuration for the curves:

CURVE CU 2/90

Used with the toothed belt conveyor medium (suitable for use in an EPA) without additional drive.

CURVES KE

Used with the round belt conveyor medium in KE 2/90 and KE 2/180 versions with and without a built-in drive. Can be used for combining the longitudinal section with belts or toothed belts.

CURVES KU

Used with the flat-top chain conveyor medium in KU 2/90 and KU 2/180 versions with and without a built-in drive and conveyor medium.

CURVE ARC KU

The construction principle of curves KU 2/0-90 and KU 2/0-180 with the conveyor medium flat-top chain allows smooth integration into longer conveyor units driven by a single drive.

Notice:

- ▶ For higher drive loads with integration of sections and curves, please consider the layout design
- ▶ The use of an automatic lubrication unit for curves with flat-top chains is highly recommended

Curve CU 2/90

- ▶ 90° curve conveying of the workpiece pallet
- ▶ With no additional drive for the curve function
- ▶ Max. total workpiece pallet weight up to 10 kg
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Curve in anti-static version
- ▶ Can be combined with WT 2 and WT 2/F

Notice: Accumulation operation not permitted in the curve.

The drive for curve CU 2/90 with the toothed belt conveyor medium is provided by the belt section.

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Accumulation pressure regulation, e.g. with rocker WI/M, see p. 8-138

Scope of delivery

- ▶ Belt section
- ▶ Inner guide
- ▶ Outer guide
- ▶ Fastening material
- ▶ Connection kit 3842538259

Condition on delivery

- ▶ Some assembly required

Curve KE 2/O-180...

- ▶ 180° curve conveying of the workpiece pallet
- ▶ Suitable for combination with BS 2/K or BS 2/M-2
- ▶ Curve module without built-in drive
- ▶ Max. total workpiece pallet weight = 20 kg
- ▶ Conveyor medium: Round belt (suitable for use in an EPA)
- ▶ Can be combined with WT 2, WT 2/F and WT 2/LS (only with version LS)

Notice:

- ▶ Accumulation operation not permitted
- ▶ Drive by belt section BS 2/K (pulling operation) or by BS 2/M-2

Required accessories

- ▶ 2x belt section BS 2/K, see p. 4-21 or
2x belt section BS 2/M-2, see p. 3-9

Scope of delivery

- ▶ Curve, complete with fastening parts

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4

Condition on delivery

- ▶ Some assembly required
- ▶ Inner guide included

Belt section BS 2/K

- ▶ To drive a curve KE 2/O...
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Max. permissible section load up to 60 kg in accumulation operation (incl. the driven curve section)
- ▶ Can be combined with WT 2, WT 2/F and WT 2/LS

4

The belt section BS 2/K is a conveyor section that is ready for operation with the toothed belt conveyor medium and a built-in drive. It is used to drive the curves KE 2/O... and to

longitudinally convey workpiece pallets in the infeed and outfeed sections.

Scope of delivery

- ▶ Belt section, complete with drive motor

Condition on delivery

- ▶ Some assembly required
- ▶ Motor included

Curve arc KU 2/O-...

The construction principle of curves KU 2/O-... with the conveyor medium flat-top chain allows smooth integration into longer conveyor units driven by a single drive.

In order to mount such units, the curve arcs KU 2/O-... are offered without the conveyor medium, and drive and return heads. The following guidelines must be taken into account when designing sections with integrated curves.

The AS 2/...-C and UM 2/...-C on the conveyor units can be used for the drive and return unit. The overall length of the flat-top chain results from the sum of the required length of the conveyor medium for each component.

Drive layout

Each change in the direction of the conveyor medium on the transport level, such as with curves KU 2, results in a loss through friction which must be offset by the drive of the section.

This increase in stress on the drive is taken into account by the curve factor. Multiplying the workpiece pallet load that arises before the curve with the curve factor results in the necessary load capacity of the drive. The curve factor is 1.5 for every 90° curve angle.

The following applies as a general guideline:

- For each drive module AS 2/C, max. 2x curve arc of 90° or max. 1x curve arc of 180°
- Mount curve arc directly on a return unit UM 2/C-170
- For permitted total workpiece pallet weights in
 - a 90° curve arc: 90 kg
 - 180° curve arc: 70 kg
- The workpiece pallet loads before and in a 180° curve is 70 kg and an additional 100 kg after the curve. From this arises the minimum required load capacity of $(70 \text{ kg} * 1.5 * 1.5) + 100 \text{ kg} = 257.5 \text{ kg}$. The drive module AS 2/C-400 must be selected for this section.
- The workpiece pallet loads before and in the first 90° curve are 50 kg before and in the second 90° curve, another 40 kg before and in the second curve, and another 400 kg after the second curve. From this arises the minimum required load capacity of $(50 \text{ kg} * 1.5 * 1.5) + (40 \text{ kg} * 1.5) + 400 \text{ kg} = 572.5 \text{ kg}$. The drive module AS 2/C-700 must be selected for this section.

Curve arc KU 2/O-90

- ▶ Curve arc without built-in drive
- ▶ Accumulation operation possible
- ▶ Plastic chain guides
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H, WT 2/F-H and WT 2/LS

Notice:

- ▶ Flat-top chain in version ESD is not permitted
- ▶ The automatic lubrication unit LU 2 is highly recommended for flat-top chains
- ▶ Cannot be combined with ESD flat-top chain
- ▶ Motor mounting centered not possible for WT 2/LS

The curve arcs KU 2/O without drive or conveyor medium are used for setting up sections with integrated curves to

transport the workpiece pallets in accumulation operation.

Required accessories

- ▶ Plastic flat-top chain conveyor medium 3842551226
- ▶ Drive module AS 2/C-..., see p. 3-58
- ▶ Return unit UM 2/C-..., see p. 3-70

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Section ST 2/C-100, see p. 3-75
- ▶ Profile connector, see p. 9-16

Condition on delivery

- ▶ Assembled

Notice:

- ▶ Flat-top chain in version ESD is not permitted
- ▶ The automatic lubrication unit LU 2 is highly recommended for flat-top chains
- ▶ Motor mounting centered not possible for WT 2/LS

The curve arcs KU 2/O without drive or conveyor medium are used for setting up sections with integrated curves to

transport the workpiece pallets in accumulation operation.

Required accessories

- ▶ Plastic flat-top chain conveyor medium 3842551226
- ▶ Drive module AS 2/C-..., see p. 3-58
- ▶ Return unit UM 2/C-..., see p. 3-70

Recommended accessories

- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Section ST 2/C-100, see p. 3-75
- ▶ Profile connector, see p. 9-16

Condition on delivery

- ▶ Assembled

Rotary units

The rotary units (DE) are modules used for horizontal rotation and transportation of workpiece pallets. The rotation is possible in 90° steps in the range from 0° to 270°.

Through the rotary units, branches and crossings are also possible for large and/or heavy workpiece pallets. Since the rotation is performed "on the spot", the space requirement is very small, as opposed to a curve, especially in the case of large WTs. However, as with a curve, the direction of transport is retained.

All rotary units have their own rotary drive and an integrated section for the longitudinal conveyor.

Depending on the WT size, WT type and the conveyor medium (CM) used, the rotary unit is available in different sizes (BG). The modular units are available with or without protective housing.

Additional stop gates VE 2/... must be provided for pre-separation.

Rotary unit DE 2 – BG 4

- ▶ The rotary unit is a module for the horizontal rotation and transport of workpiece pallets
- ▶ With this, branch-offs and crossings are also possible for heavy workpiece pallets (up to 208 kg)
- ▶ Can be used with all workpiece pallets WT 2, WT 2/F, WT 2/H and WT 2/F-H
- ▶ Conveyor medium optionally toothed belt, flat-top chain, accumulation roller chain, duplex chain
- ▶ Reversible for toothed belt and accumulation roller chain
- ▶ Total weight up to 208 kg, depending on WT size
- ▶ Electric rotary drive with internal motor mounting
- ▶ Motor mounting for the section at the section end
- ▶ Rotary range of a total of 270°, divided in 90° steps

4

Scope of delivery

- ▶ Including sensor for end position of the rotary movement
1x M12 with M8, $S_N = 4$ mm, flush, 3842549811

Required accessories

- ▶ Anchoring of the rotary unit at the floor for each bolting point:
 - 1x foundation bracket, 3842146848
 - 1x dowel, 3842526560
 - 2x T-bolts, 3842528718
 - 2x flange nuts, 3842345081
- ▶ Frequency converter:
 - 1x for the motor for rotary movement
 - 1x for motor of belt section (deceleration and start-up of the workpiece pallet)
- ▶ I/O module (PROFIBUS® or Ethernet):
 - For connection of proximity switches for control of the workpiece pallet
 - For connection of necessary solenoid valves for control of the stop gates

Condition on delivery

- ▶ Ready-to-install incl. leg sets
- ▶ Optional: Protective covers assembled
- ▶ Sensors:

Transverse conveyor

Selection of transverse conveyors

Selection of transverse conveyors

Transverse conveyors are used to change the workpiece pallet direction of transport. They are used to create a branch in the workpiece pallet paths to the individual processing stations. The orientation of the workpiece pallet relative to its conveying direction changes when it is moved from longitudinal conveying to transverse conveying and vice versa.

Transverse conveyors can be implemented in the TS 2plus transfer system in two different ways:

- ▶ **Electrical transverse conveyors EQ 2/...** (see p. 5-4) (e.g., version EQ 2/TR with roller section), or
- ▶ **Lift transverse units HQ 2/...** (see p. 5-24) in combination with belt sections BS 2 or conveyor units

The electrical transverse conveyors EQ 2/... are complete macro modules. They consist of one or two HQ 2/... and additional transverse conveyor sections (BS 2.../RS 2).

The transverse section transport level is 10 mm above the transport level of the longitudinal section.

Notice: The lift transverse units lift the workpiece pallet out of the longitudinal section and transport it transversely into the transverse section, which is situated 10 mm higher.

Electrical transverse conveyors EQ 2/...

5-4

Lift transverse units HQ 2/...

5-24

Roller sections RS 2/...

5-92

Electrical transverse conveyors EQ 2/...

Electrical transverse conveyors EQ 2 are used to move workpiece pallets from a longitudinal section onto a second, parallel longitudinal section. EQ 2s are complete macro modules which consist of one or two lift transverse units HQ 2 and one transverse conveyor section (BS 2.../RS 2).

All the transport belts are driven by a motor.

For the transfer system TS 2plus, electrical transverse conveyors are available with the following transport function:

EQ 2/TR

Moving workpiece pallets from one longitudinal section to a second one, which runs parallel a small distance away, across a roller section.

EQ 2/T

Moving workpiece pallets from one longitudinal section to a second one, which runs parallel a large distance away, across a transverse belt section.

EQ 2/TE

Moving pallets from a longitudinal section to a transverse belt section and vice versa.

Notice: Accumulation on the HQ 2... is not permitted.

All EQ 2 designs are delivered with pneumatic connections, optionally for the center and top lift position, or for the bottom, center and top lift position. Pneumatic valves are not included in the scope of delivery.

The pneumatic valves are designed so that the rest position acts as an exhaust position, moving the lift transverse units to the center position in case of a pressure drop. In the center position, the workpiece pallets are stopped by the lift transverse unit. This function provides increased safety and ensures easier commissioning.

Electrical transverse conveyor EQ 2/TR...

- ▶ Complete macro module for connecting two parallel longitudinal sections at a short distance from each other
- ▶ In tandem design with roller section RS 2 at a distance of $a = 45 \dots 135$ mm
- ▶ Size 2 with two lifting cylinders from $\geq 480 \times 480$ mm
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Suspended motor mounting only. Other motor mounting variants available on request
- ▶ Can be combined with workpiece pallets WT 2/E, WT 2, WT 2/F and WT 2/LS (only with version LS)

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Protective case

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets at $v_N > 9$ m/min
- ▶ Rockers WI 2/... (see p. 8-144ff), WI/M (s. S. 8-138) and dampers DA 2/60 (see p. 8-68), DA 2/100-C for BG 2 (s. p. 8-74) for infeeding the workpiece pallet
- ▶ Assembly tool (see p. 5-22) for simple tensioning of the connection belt toothed belt

Condition on delivery

- ▶ Lift transverse units HQ 2/O and HQ 2/T assembled
- ▶ Connection kit
- ▶ Motor mounting kit, drive motor enclosed
- ▶ Roller section with roller elements
- ▶ Protective case, not assembled

Electrical transverse conveyor EQ 2/TE...

- ▶ Pre-assembled assembly for branching off into a transverse section in which the second end does not lead to a further transverse section (dead end)
- ▶ Size 2 from $\geq 480 \times 480$ mm with two lifting cylinders per lift transverse unit
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with workpiece pallets WT 2/E, WT 2, WT 2/F and WT 2/LS (only with version LS)

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation on the lift transverse unit is not permitted

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112

Scope of delivery

- ▶ 1x lift transverse unit HQ 2/O
- ▶ 1x belt section BS 2/TE
- ▶ 1x connection kit
- ▶ 1x protective case SK 2/B
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets WT 2, WT 2/F, WT 2/H or WT 2/F-H at $v_N > 9$ m/min
- ▶ Rockers WI 2 (see p. 8-144ff) or WI/M (see p. 8-138) and dampers DA 2/60 (see p. 8-68) or DA 2/100-C for BG 2 (see p. 8-74) for infeeding workpiece pallets
- ▶ Assembly tool (see p. 5-22) for simple tensioning of the connection belt toothed belt

Condition on delivery

- ▶ Lift transverse unit HQ 2/O, assembled
- ▶ Belt section BS 2/TE, assembled
- ▶ Connection kit included
- ▶ Protective case, not assembled

Lift transverse units HQ 2/...

The lift transverse units have to:

- ▶ Move the workpiece pallets from a longitudinal section to a transverse section
- ▶ Move the workpiece pallets from a transverse section onto a longitudinal section

Lift transverse units for overall workpiece pallet weights up to 240 kg are available for the transfer system *TS 2plus*.

All lift transverse units have one thing in common – vertical pneumatic movement and horizontal transportation action. The vertical movement can be set in three positions:

- ▶ Spring-centered middle position (basic position, 4 mm below transport level). It serves as the transport position when the lug cam is lowered and as the locked position when the stop cam is raised
- ▶ Transverse conveyor position (10 mm above transport level of longitudinal conveyor)
- ▶ Lower transport position (11 mm below conveying level). In this low position a workpiece pallet is also released onto a longitudinal section when the stop cam is raised

Lift transverse units HQ 2/S

Lift transverse unit HQ 2/S

- ▶ Lift transverse unit for feeding out from a longitudinal section into a transverse section and vice versa
- ▶ Low height with motor mounted on side. It is therefore suitable for the operation of double-deck conveyor sections
- ▶ In two sizes with one or two lifting cylinders
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with workpiece pallets WT 2/E, WT 2 and WT 2/F

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted

Vertical movement is delivered by pneumatic cylinders. Two sizes are available:
Size 1 (BG 1) for total weights (workpiece pallet + load) up to 30 kg by one lifting cylinder.

Size 2 (BG 2) for total weights (workpiece pallet + load) up to 50 kg by two lifting cylinders for workpiece pallet dimensions from 400 x 480 mm.

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112ff

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets at $v_N > 9$ m/min
- ▶ Rockers WI 2/... (see p. 8-144ff), WI/M (see p. 8-138) and dampers DA 2/60 (see p. 8-68), DA 2/100-C for BG 2 (see p. 8-74) for infeeding the workpiece pallet
- ▶ Assembly tool (see p. 5-22) for simple tensioning of the connection belt toothed belt

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Protective case SK 2/B

Condition on delivery

- ▶ Pre-assembled in modular units
- ▶ Protective case, not assembled

Lift transverse unit HQ 2/O

- ▶ Lift transverse unit without built-in drive for outfeeding from a longitudinal section into a transverse section and vice versa
- ▶ Drive by toothed belt coupling
- ▶ The low height is suitable for the operation of double-deck conveyor sections
- ▶ Suitable for use in special designs
- ▶ In two sizes with one or two lifting cylinders
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with WT 2 and WT 2/F

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted

The HQ 2/O does not have a built-in drive. Drive is provided by a toothed belt coupling with a belt section BS 2/T, BS 2/TE, BS 2/M-2 or by a separate drive motor. It is a part of all electrical transverse conveyors EQ 2/... and can also be used in special system designs. The vertical movement is delivered by pneumatic cylinders.

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112ff
- ▶ Belt section BS 2/T (see p. 5-37), BS 2/TE (see p. 5-40), BS 2/M-2 (see p. 3-9) for driving
- ▶ HQ 2/T (see p. 5-43) in the tandem design
- ▶ Connection belt set for HQ 2/O drive (see p. 5-34) via a belt section
- ▶ Protective case SK 2/B, see p. 5-35

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.

Two sizes are available:

Size 1 (BG 1) for total weights (workpiece pallet + load) up to 30 kg by one lifting cylinder.

Size 2 (BG 2) for total weights (workpiece pallet + load) up to 50 kg by two lifting cylinders for workpiece pallet dimensions from 400 x 480 mm.

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets at $v_N > 9$ m/min
- ▶ Rockers WI 2 (see p. 8-144ff) or WI/M (see p. 8-138) and dampers DA 2/60 (see p. 8-68) or DA 2/100-C for BG 2 (see p. 8-74) for infeeding workpiece pallets
- ▶ Assembly tool (see p. 5-22) for simple tensioning of the connection belt toothed belt

Condition on delivery

- ▶ Assembled

Connection belt for HQ 2/O

If the lift transverse unit HQ 2/O is driven via a belt section, a connection belt set is required. The HQ 2/O (BG 1 or BG 2) can be combined with BS 2/TE, BS 2/T or BS 2/M-2 using the connection belt set. The b_o and b_L parameters are decisive for selection of the connection belt set.

Dimensions

Lift transverse unit HQ 2/T...

- ▶ Lift transverse unit without built-in drive for outfeeding from a longitudinal section into a transverse section with a roller section and vice versa
- ▶ Used in tandem version with the HQ 2/O
- ▶ Drive by toothed belt coupling
- ▶ Suitable for use in special designs
- ▶ In two sizes with one or two lifting cylinders
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with workpiece pallets WT 2/E, WT 2, WT 2/F and WT 2/LS (only with version LS)

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted

Vertical movement is delivered by pneumatic cylinders.

Two sizes are available:

Size 1 for total weights (workpiece pallet + load)
up to 30 kg.

Size 2 for workpiece pallet dimensions from 400 x 480 mm.

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112ff
- ▶ Protective case SK 2, see p. 5-48

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Incl. drive kit (required to drive an HQ 2/T)

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets at $v_N > 9$ m/min
- ▶ Rockers WI 2 (see p. 8-144ff) or WI/M (see p. 8-138) and dampers DA 2/60 (see p. 8-68) or DA 2/100-C for BG 2 (see p. 8-74) for infeeding workpiece pallets

Condition on delivery

Lift transverse unit HQ 2/U...

- ▶ Lift transverse unit for outfeeding from a longitudinal section into a transverse section and vice versa
- ▶ Use in tight spaces by means of suspended drive motor (outside dimensions must be no wider than the section)
- ▶ Drive by toothed belt coupling is not possible because of the compact construction
- ▶ Conveyor medium: Toothed belt (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with workpiece pallets WT 2/E, WT 2, WT 2/F and WT 2/LS (only with version LS)

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112ff

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Protective case

Recommended accessories

- ▶ Damper DA 2/60 (see p. 8-68) for outfeeding workpiece pallets at $v_N > 9$ m/min
- ▶ Rockers WI 2 (see p. 8-144ff) or WI/M (see p. 8-138) and dampers DA 2/60 (see p. 8-68) or DA 2/100-C for BG 2 (see p. 8-74) for infeeding workpiece pallets

Condition on delivery

- ▶ Assembled
- ▶ Kit for electric position sensing included

Lift transverse unit HQ 2/U-H

In combination with HQ 2/U-H, only wear pads PE are recommended for use on the workpiece pallets.

Required accessories

- ▶ 1x sensor M12x1 with rated switching distance $S_N = 4$ mm for each (top/center/bottom) position sensing location, see p. 8-112ff
- ▶ Adapter plate (available on request) required to mount a VA 2/D-130 perpendicular to the main direction of transport

Recommended accessories

- ▶ Dampers DA 2/150-E (see p. 8-80), DA 2/100-E (see p. 8-77) for outfeeding workpiece pallets WT 2, WT 2/F, WT 2/H or WT 2/F-H; required when $v_N > 9$ m/min or when total weight of the workpiece pallet > 30 kg
- ▶ Rockers WI 2/... (see p. 8-144ff), WI/M (see p. 8-138) and damper DA 2/100-C (see p. 8-74) for infeeding workpiece pallets WT 2 and WT 2/F
- ▶ Decentralized automatic lubrication unit LU 2 (see p. 9-5) or central automatic lubrication unit LU 2/P (see p. 9-7)

- ▶ Lift transverse unit for outfeeding from a longitudinal section into a transverse section and vice versa
- ▶ Use for high total weights up to 2 kg/cm on the smallest side of the workpiece pallet
- ▶ Sensor mounting for speed control during infeeding possible
- ▶ Lifting movements through two to four block cylinders according to size
- ▶ Conveyor medium: Duplex chain (suitable for use in an EPA)
- ▶ Pneumatic equipment for 2 (top, center) or 3 (top, center, bottom) lift positions
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ The lateral guides can be mounted on either the left or the right depending on the conveying situation
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H and WT 2/F-H

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted
- ▶ Lateral guides of different heights allow for a fixed stop when outfeeding on the HQ
- ▶ Combination with WT 2/LS not possible

Scope of delivery

- ▶ Incl. fastening material
- ▶ Pneumatic equipment for two or three positions
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Protective case

Condition on delivery

- ▶ Pre-assembled incl. pneumatic equipment
- ▶ Protective case, not assembled

Pneumatic diagram

Use the pneumatic diagram:

A (for pneumatic equipment PN = 2) if you want to transfer the WT from the longitudinal section to the transverse section (TFE 1) or from the transverse section to the longitudinal section (TFE 2).

B (for pneumatic equipment PN = 3), if you want to outfeed the WT from the longitudinal section to the transverse section (TFE 3) or infeed from the transverse section to the longitudinal section (TFE 4).

Lift transverse unit HQ 2/C-H

- ▶ Lift transverse unit for outfeeding from a longitudinal section into a transverse section and vice versa
- ▶ Use for high total weights up to 2 kg/cm on the smallest side of the workpiece pallet and up to 240 kg
- ▶ Flat construction permits system layouts on several levels
- ▶ Synchronized lifting movement of the four block cylinders for uniform and parallel lifting movement
- ▶ Conveyor medium: Flat-top chain
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Depending on the installation, height-adjustable lateral guides can be used as a fixed stop for outfeeding or as a lateral guide when changing workpiece pallets
- ▶ Fixed stops in the form of adjustable/movable lateral guides made of strip steel
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H and WT 2/F-H

5

Recommended accessories

- ▶ Dampers DA 2/100-E (see p. 8-77) and DA 2/150-E (see p. 8-80) or a fixed stop (included in the scope of delivery) can be used for outfeeding workpiece pallets WT 2, WT 2/F, WT 2/H and WT 2/F-H. The damper DA 2/100-C (see p. 8-74) can be used at the belt end for outfeeding a workpiece pallet WT 2 or WT 2/F.
- ▶ Dampers DA 2/100-H (see p. 8-83) or DA 2/250-H (see p. 8-86) for outfeeding workpiece pallets WT 2/H and WT 2/F-H
- ▶ A fixed stop (included in the scope of delivery) or damper DA 2/100-C can be used for infeeding workpiece pallets WT 2 and WT 2/F. This is also possible in combination with a rocker WI 2 (see p. 8-144), WI 2/X (see p. 8-148), WI 2/D (see p. 8-150) or a WI 2/M (see p. 8-138).
- ▶ Dampers DA 2/100-H and DA 2/250-H can be used for infeeding workpiece pallets WT 2/H and WT 2/F-H.
- ▶ Decentralized automatic lubrication unit LU 2 (see p. 9-5) or central automatic lubrication unit LU 2/P (see p. 9-7)

Notice:

- ▶ Reversible operation possible
- ▶ Accumulation operation not permitted
- ▶ Combination with WT 2/LS not possible

Required accessories

- ▶ Sensor M12x1 for position sensing (top/center/bottom), see p. 8-112ff
- ▶ Dampers for outfeeding and infeeding workpiece pallets, see p. 8-66

Scope of delivery

- ▶ Incl. fastening material
- ▶ Switch holder for 12 mm sensor for position sensing
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Lateral guide kit for $b_1 \leq 640$ mm (3842549567) or for $b_1 > 640$ mm (3842549568)

Condition on delivery

- ▶ Assembled
- ▶ Kits for lateral guides included

Technical data

Material number		3842999002
Max. total workpiece pallet weight	m_G	kg 240
Required compressed air connection	p	bar 4 ... 6
Push in air connection	\varnothing	mm 8

Circuit diagram

1 Not included in the scope of delivery

Dimensions

Lift transverse unit HQ 2/G-H

- ▶ Lift transverse unit for outfeeding from a longitudinal section into a transverse section and vice versa
- ▶ The particularly compact construction permits system layouts on several levels when space is limited
- ▶ Use for high total weights up to 2 kg/cm on the smallest side of the workpiece pallet and up to 240 kg
- ▶ Synchronized lifting movement of the four block cylinders for uniform and parallel lifting movement
- ▶ Integrated chain tensioner; to be adjusted manually
- ▶ Conveyor medium: Duplex chain (suitable for use in an EPA)
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Depending on the installation, height-adjustable lateral guides can be used as a fixed stop for outfeeding or as a lateral guide when changing workpiece pallets
- ▶ Fixed stops in the form of adjustable/movable lateral guides made of strip steel
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H and WT 2/F-H

Required accessories

- ▶ Sensor M12x1 for position sensing (top/center/bottom), see p. 8-112ff
- ▶ Dampers for outfeeding and infeeding workpiece pallets, see p. 8-66

Recommended accessories

- ▶ Dampers DA 2/100-E (see p. 8-77), DA 2/150-E (see p. 8-80) or a fixed stop (included in the scope of delivery) for outfeeding workpiece pallets WT 2, WT 2/F, WT 2/H and WT 2/F-H; required when $v_N > 9$ m/min or when total weight of the workpiece pallet > 30 kg. The damper DA 2/100-C (see p. 8-74) can be used at the belt end for outfeeding a workpiece pallet WT 2 or WT 2/F.
- ▶ Dampers DA 2/100-H (see p. 8-83) or DA 2/250-H (see p. 8-86) for outfeeding workpiece pallets WT 2/H and WT 2/F-H

Notice:

- ▶ Accumulation operation not permitted
- ▶ Reversible operation possible
- ▶ Only workpiece pallets with wear pad PE are permitted
- ▶ A fixed stop (included in the scope of delivery) or damper DA 2/100-C can be used for infeeding workpiece pallets WT 2 and WT 2/F. This is also possible in combination with a rocker WI 2 (see p. 8-144), WI 2/X (see p. 8-148), WI 2/D (see p. 8-150) or a WI 2/M (see p. 8-138).
- ▶ Dampers DA 2/100-H and DA 2/250-H can be used for infeeding workpiece pallets WT 2/H and WT 2/F-H.
- ▶ Decentralized automatic lubrication unit LU 2 (see p. 9-5) or central automatic lubrication unit LU 2/P (see p. 9-7)

Scope of delivery

- ▶ Incl. fastening material
- ▶ Switch holder for 12 mm sensor for position sensing
- ▶ Construction kit for electrical position sensing for 1 to 3 sensors (top/center/bottom). You can query all 3 lift positions.
- ▶ Lateral guide kit for $b_l \leq 640$ mm (3842549567) or for $b_l > 640$ mm (3842549568)

Condition on delivery

- ▶ Assembled
- ▶ Kits for lateral guides included

Lift positions

Circuit diagram

1 Not included in the scope of delivery

- 1 Lower position
- 2 Middle position
- 3 Upper position
- *) Transport level = 0

Belt section BS 2/G-250

The belt section is a functional conveyor section with its own drive for the transverse conveyor of the workpiece pallet between parallel conveyor sections in conjunction with two lift transverse units HQ 2/... or for longitudinal conveying on conveyor sections up to 2000 mm.

Recommended accessories

- ▶ Connection kits, see p. 9-21
- ▶ Leg sets SZ 2/..., see p. 6-4
- ▶ Decentralized automatic lubrication unit LU 2 (see p. 9-5) or central automatic lubrication unit LU 2/P (see p. 9-7)

Condition on delivery

- ▶ Assembled

- ▶ Particularly robust, functional conveyor section, complete with drive
- ▶ Longitudinal conveying of the workpiece pallet on conveyor sections of up to 2000 mm
- ▶ Transverse conveyor between parallel conveyor sections
- ▶ Can also be used in longitudinal conveyors
- ▶ Recommended for use with two lift transverse units HQ 2
- ▶ Conveyor medium: Duplex chain (suitable for use in an EPA)
- ▶ Motor mounting right, left or central (central from track width of 240 mm)
- ▶ Motor connection: Optionally with cable/plug or terminal box
- ▶ Integrated chain tensioner; can be adjusted manually
- ▶ Special models on request

Notice:

- ▶ Accumulation operation not permitted
- ▶ Reversible operation possible
- ▶ Only workpiece pallets with wear pad PE are permitted
- ▶ Connection kits only available on the drive side

Lift EL 2

Lift for changing workpiece pallets between two different transport levels.

Required accessories

- ▶ Optical sensor for infeeding
- ▶ Rocker WI/M, see p. 8-138
- ▶ Pre-stop gate and sensors for pre-sorting, see p. 8-4

Recommended accessories

- ▶ Decentralized automatic lubrication unit LU 2 (see p. 9-5)
- ▶ Battery box with battery, see p. 5-89
- ▶ Connection cable battery box – motor RKG 0062, see p. 5-89
- ▶ Mains filter

Condition on delivery

- ▶ Motor control unit, assembled (GM = 1)
- ▶ Motor control unit, not assembled (GM = 0)
- ▶ Protective cover, partially assembled (c2, c4, c5 and c6 are assembled, see fig. on page 5-81 below)

- ▶ Drive through synchronous servomotor MSM with absolute encoder
 - Electrically released holding brake
 - Interface: Plug-in connectors for encoder connection and power connection
 - The following communication protocols are included: Sercos III, EtherCAT SOE, EtherCAT COE, Profinet/IO, Ethernet/IP
- ▶ Lift for conveying a workpiece pallet vertically from a lower conveying section to an upper conveying section or vice versa
- ▶ Designed as a head lift
- ▶ Suitable for use in an EPA
- ▶ For all workpiece pallet dimensions to 800 x 800 mm
- ▶ Lower conveying level possible from 290 mm
- ▶ Max. total workpiece pallet weight = 60 kg
- ▶ Short cycle times of up to 7.9 s are possible
- ▶ Strokes of up to 1500 mm can be achieved
- ▶ Maintenance hatch for service purposes included
- ▶ Options are available for protective cover material
- ▶ The product to be transported must not exceed b_{WT} or l_{WT} of the workpiece pallet

Notice:

- ▶ Accumulation operation not permitted, max. 1 WT per transfer process
- ▶ Upper transport level to maximum 1790 mm
- ▶ Reversible operation not permitted
- ▶ Fall protection via servomotor holding brake

Scope of delivery

- ▶ GM = 0: Gear
- ▶ GM = 1: Gear, servomotor, power cable 5 m, compact converter, cable for compact converter 5 m
- ▶ Assembly and adapter set for the decentralized automatic lubrication unit LU 2
- ▶ Connection kit for mechanically connecting the EL 2 when inserting and removing it from adjacent sections
- ▶ Incl. 2x sensor M12x1, $S_N = 8$ mm (position detection WT, position detection EL 2)
- ▶ Protective cover

Operating mode (parameter RM, see p. 5-81)
C-shape: Running direction downwards (TD = D)

The gripper arm moves in a C-shape between the two transport levels.

- 1 Gripper arm retracts WT on upper transport level
- 2 Gripper arm conveys WT on lower transport level
- 3 Gripper arm ejects WT on lower transport level
- 4 Empty gripper arm is retracted
- 5 Empty gripper arm is conveyed on upper transport level
- 6 Empty gripper arm moves to position 1

If the running direction is upwards (TD = U), the sequence is reversed.

O-shape: Running direction downwards (TD = D)

The gripper arm moves in an O-shape between the two transport levels.

- 1 Gripper arm retracts WT on upper transport level
- 2 Gripper arm conveys WT on lower transport level
- 3 Gripper arm ejects WT on lower transport level
- 4 Empty gripper arm remains on lift front
- 5 Empty gripper arm is conveyed on front side on upper transport level
- 6 Empty gripper arm is at position 1

If the running direction is upwards (TD = U), the sequence is reversed.

Intermediate section with roller

- ▶ Unmounted roller section for transverse conveying of workpiece pallets between parallel conveyor sections at a distance of $a = 45$ to 135 mm
- ▶ Use with two lift transverse units HQ 2
- ▶ Without built-in drive
- ▶ Conveyor medium: Rollers made of galvanized steel
- ▶ Reversible operation possible
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with WT 2, WT 2/F and WT 2/LS

Installation between two conveyor units ST 2 or belt sections BS 2 for transverse conveying.
Alternatively, use as an inclined passive conveyor section.

Scope of delivery

- ▶ Incl. fastening material

Condition on delivery

- ▶ Not assembled

Roller section RS 2 $a = 90$	3842522140
Roller section RS 2 $a = 135$	3842522141
Roller section RS 2 $a = 160$	3842522142
Roller section RS 2 $a = 200$	3842522143

Technical data

Dimensions

Roller element RE

- ▶ Assembled roller elements for the manual transportation of workpiece pallets
- ▶ Use as an inclined passive conveyor section is possible
- ▶ Without built-in drive
- ▶ Conveyor medium: PA66 rollers
- ▶ Reversible operation possible
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F, WT 2/H, WT 2/F-H and WT 2/LS

5

Roller elements can be clipped into section profile SP 2/B instead of driven belts. Roller sections constructed in this way are an economical solution for moving workpiece pallets or other similar pallets manually on a transfer system.

The number of roller elements is calculated based on the section length. The remaining measurement < 45 mm has to be distributed by spacing the roller elements accordingly.

Required accessories

- ▶ Section profile SP 2/B, see p. 3-31

Condition on delivery

- ▶ Assembled

Roller track set RB 2/UM 2

- ▶ Mounted roller section for mounting on AS 2/B... or UM 2/B for transverse conveying
- ▶ Mounted roller section for mounting on AS 2/B... or UM 2/B for longitudinal conveying. Possible as a replacement for RB 2 (3842532822). 1 set RB 2/UM per modular unit.
- ▶ Additional workpiece pallet support on the front transition from AS 2/B to UM 2/B or from AS 2/B or UM 2/B to a lift transverse unit
- ▶ Installation along a belt section during the transition from AS 2/B to UM 2/B or vice versa
- ▶ Conveyor medium: Belt
- ▶ Without drive
- ▶ Required for workpiece pallet lengths of 160 mm and 240 mm; recommended for longer lengths
- ▶ Reversible operation possible
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F and WT 2/LS

5

The roller track supports the workpiece pallets at the transition point between a conveyor unit and another adjacent conveyor unit. The roller track can be mounted longitudinally on a belt section for the transition from AS to UM or UM to AS, if 1 x RB 2/UM 2 per modular unit AS 2/B... and UM 2/B is used.

Scope of delivery

- ▶ Set (containing 2x roller track, 2x guide profile, 2x fastening kit)

Condition on delivery

- ▶ Assembled

Roller section RS 2/H

- ▶ Mounted roller section for transverse conveying of workpiece pallets between parallel conveyor sections at a distance of $a = 90$ to 690 mm
- ▶ Use with two lift transverse units HQ 2
- ▶ Without built-in drive
- ▶ Conveyor medium: Accumulation roller chain with steel accumulation rollers and small parts protection
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F, WT 2/H and WT 2/F-H

5

Installation between two conveyor units ST 2/...-H or belt sections BS 2/...-H with lift transverse unit HQ 2/U-H or

HQ 2/C-H. Alternatively, use as an inclined passive conveyor section.

Recommended accessories

- ▶ Note on cross connectors QV: With conveyor section distances $a > 90$ mm, we recommend stabilizing the roller section RS 2/H using the cross connectors QV, see p. 5-103

Scope of delivery

- ▶ Section, incl. accumulation roller chain with steel accumulation rollers and small parts protection
- ▶ Incl. fastening material

Condition on delivery

- ▶ Assembled

Leg sets

Selection of leg sets

6-2

6

Selection of leg sets

New leg set height H

Defines the height of the leg sets with the new parameter H, measured from floor to top of the conveyor medium (= conveying level).

In addition, the height of the section profile is specified as an additional ordering parameter (AO).

The height of the leg set to lower edge of section profile (= h_{sz}) is calculated as follows: $h_{sz} = H - AO$.

Leg sets SZ 2/...

6-4

Reinforcement SZ 2 - ST 2

6-31

Foundation bracket, floor dowel, T-bolt, flange nut, bracket cover caps

6-32

Leg sets SZ 2/...

Leg sets

Leg sets support the conveyor section. They have to be mounted directly next to the drive and return units, and underneath section joints. Conveyor units have to be supported with extra leg sets at equal distances of max. 2000 mm.

Fastening material

Leg sets must be anchored to the floor with foundation brackets (3842146848) and floor dowels (3842526560).

Bracket cover caps are not included in the scope of delivery for all leg sets.

Leveling feet

The height-adjustable leveling feet (incl. fastening material) are included in the scope of delivery. The engagement depth of the leveling feet must be at least 30 mm for all leg sets.

¹⁾ Calculations of b1 and b2 depending on section profile width:
Section profile width 45 mm: $b_1 = 2(b+15)+a$; $b_2 = 2(b+15)+a-90$
Section profile width 50 mm: $b_1 = 2(b+25)+a-10$; $b_2 = 2(b+25)+a-100$

Leg set SZ 2/K-90

- ▶ Leg set for curves K...-90

The leg sets have a 90°curve.

Required accessories

- ▶ Foundation bracket 3842146848, see p. 6-32
- ▶ Floor dowel 3842526560, see p. 6-33

Scope of delivery

- ▶ Incl. height-adjustable leveling foot
- ▶ Incl. all fastening material for mounting on the curve KE 2/90

Recommended accessories

- ▶ Cover caps for bracket, see p. 6-34

Condition on delivery

- ▶ Assembled (MT = 1)
- ▶ Not assembled (MT = 0)

Positioning and orientation

Selection of positioning units

7-2

7

Selection of positioning units

In order to process and maintain manufacturing tolerances, workpiece pallets must be stopped and positioned in the processing station.

Depending on the design, the positioning unit can move the workpiece pallets with an accuracy of ± 0.05 mm. Vertical process forces of up to 100 kN can be taken up.

INTENDED USE

- ▶ A stop gate VE 2 (see p. 8-6) is sufficient for use with a manual workstation that has low requirements for repetition accuracy and if no forces act upon the workpiece pallet
- ▶ Transverse repetition accuracy can be improved using a workpiece pallet inner guide (see p. 7-5)
- ▶ To lift the workpiece pallet from the conveyor medium: PE 2 (see p. 7-7) and PE 2/X (see p. 7-11)
- ▶ For larger lifting distances: HP 2 (see p. 7-28) and HP 2/L (see p. 7-19)
- ▶ For high forces, e.g. in presses or in riveting machines: PE 2/XP, see p. 7-34
- ▶ For process force decoupling: PE 2/XX, see p. 7-42
- ▶ To change the workpiece pallet orientation: Lift rotary unit HD 2 (see p. 7-48) and lift rotary unit HD 2/H (see p. 7-51)

Workpiece pallet inner guide

- ▶ Easy mounting on conveyor sections
- ▶ Positioning with the guide groove on the workpiece pallet WT 2/...
- ▶ Can be combined with all workpiece pallets WT 2, WT 2/F and WT 2/E
- ▶ Can be combined with workpiece pallet WT 2/LS from $b \geq 240$ mm

7

Using a workpiece pallet inner guide and a stop gate VE 2/..., a workpiece pallet with low requirements can be positioned at the repetition accuracy (± 0.5 mm),

i.e. for manual assembly processes.

Required accessories

- ▶ Stop gate VE 2/..., see p. 8-6

Scope of delivery

- ▶ Including fastening material for installation on the conveyor section ST 2/... or belt section BS 2/...

Condition on delivery

- ▶ Not assembled

Lift positioning unit HP 2/L...

- ▶ Positions a workpiece pallet in a processing station with high repetition accuracy requirements
- ▶ Positioning with exchangeable positioning pins in the HP 2/L and positioning bushings in the workpiece pallet WT 2
- ▶ Lifting cylinder \varnothing 40 mm with damping for the lower and upper end position
- ▶ Exchange of lifting cylinder possible without disassembling the lifting plate
- ▶ 5 lift ranges h_0 from 0 ... 240 mm, infinitely adjustable central lift height within the lift range
- ▶ Optional lifting cylinder for $b = 240$ mm, center ($HA = 0$) or offset ($HA = 1$). Space-saving arrangement made possible by inner WT stop
- ▶ Adjustment time at $h_N = 50$ mm without load: Upward stroke = 0.5 s, downward stroke = 0.5 s (= lift range from 0 to 28 mm)
- ▶ Permissible vertical process forces: 400 N, incl. WT 2
- ▶ Can be combined with workpiece pallets WT 2, WT 2/F and WT 2/E
- ▶ WT 2/LS can only be combined with version LS

Required accessories

- ▶ Position sensing set for lifting cylinder SA, see p. 7-24
- ▶ Position sensing with turret stop RA, see p. 7-27
- ▶ Protective case for HP 2/L, see p. 7-26

Scope of delivery

- ▶ Incl. fastening material
- ▶ Incl. throttle check valve

Condition on delivery

- ▶ Assembled

Position sensing set RA

- Position sensing for HP 2/L special design with turret stop

7

For use with a turret stop (e.g. Somatec) the HP 2/L can be ordered with longer guide rails as a modification.

An accompanying sensor is used instead of the cylinder switch to query the upper positions on the turret stop (position sensing set RA).

Scope of delivery

- 1x series cylinder switch SN 2 (cube)
- 1x clamping holder for cylinder switch

- 1x sensor M12x1 with $S_N = 8$ mm rated switching distance range, length 45 mm (3842557633)
- 1x switch bracket for mounting on the base plate

Lift positioning unit HP 2...

- ▶ Positions a workpiece pallet in a processing station with high repetition accuracy requirements and higher workpiece pallet weights.
- ▶ Positioning via the positioning pins HP 2 and the positioning bushings on the workpiece pallet WT 2
- ▶ Lifting cylinder with adjustable top-end and bottom stop-end damping
- ▶ Upper end position damping takes effect only under full lift.
- ▶ Continuously adjustable lift height in 8 lift ranges h_N of 0 ... 404 mm
- ▶ Permissible vertical process forces: 1100 N, incl. WT 2
- ▶ Can be combined with workpiece pallets WT 2, WT 2/F and WT 2/E
- ▶ WT 2/LS can only be combined with version LS

Upper end position damping of the cylinder takes effect only under full lift. With larger lifts, we recommend separately

fixing the workpiece pallet while the HP 2 is in the highest position in order to improve repetition accuracy.

Required accessories

- ▶ Stop gate VE 2/..., see p. 8-6
- ▶ Throttle check valve, exhaust air, G3/8", diameter $d = 6$ mm
- ▶ Sensor

Recommended accessories

- ▶ Throttle kit (3842211355) to lower the WT gently onto the conveyor medium
- ▶ Protective case HP 2, see p. 7-33

Scope of delivery

- ▶ Incl. fastening material
- ▶ Switch bracket for mounting of sensors M12 for top and bottom lift position sensing

Condition on delivery

- ▶ Assembled

Positioning unit PE 2/XP

- ▶ Positions a workpiece pallet in a processing station with especially high vertical process force requirements (100 kN/60 kN), such as those needed for press-fit or riveting work
- ▶ Mounting in load sensor, positive force introduction
- ▶ Lift WT above conveying level, approx. 3 mm
- ▶ Can be combined with workpiece pallets WT 2

Notice: Combination with WT 2/LS not possible

Notice: Maximum total weight of workpiece pallet m_G incl. anvil plate or positioning plate for BG 1 is: $m_G = 20$ kg and BG 2: $m_G = 30$ kg.

Required accessories

- ▶ Anvil plate for standard sizes from 160 x 160 mm to 320 x 240 mm, see p. 7-38
- ▶ Anvil plate for 320 x 240 mm workpiece pallet, see p. 7-37
- ▶ Positioning pins, round and flat-sided
h = 30 mm for standard anvil plate
h = 21 mm for special designs

- ▶ Stop gate VE 2/..., see p. 8-6
- ▶ 2x sensor M12x70 and M12x67 with rated switching distance $S_N = 4$ mm, can be installed flush, see p. 8-112 and 8-114

Condition on delivery

- ▶ Assembled

Use of PE 2/XP for workpiece pallets greater than $b = 240 \text{ mm} \times l_T = 320 \text{ mm}$

The positioning unit PE 2/XP, designed to absorb forces, can also be used with workpiece pallets with large dimensions if the process forces are applied at certain points.

The PE 2/XP must then be arranged in such a manner that it can absorb the forces directly.

The forces may be applied off-center.

However, where process forces are applied must be within the area of the upper part of the PE 2/XP.

1 Anvil plate, example:
Process forces applied at center of workpiece pallet

Design notes

When the unit is used with workpiece pallets larger than $l_T \times b = 240 \times 320 \text{ mm}$, a special anvil plate with a thickness of 21 mm and a positioning plate with a thickness of 9 mm must be constructed.

The positioning plate must also receive the positioning pins. The anvil plate should support the WT carrying plate.

The anvil plate can also be replaced with several domes for WT support and power connection belt.

Advantage: Weight reduction.

The maximum total workpiece pallet weight m_G , incl. anvil plate or positioning plate, is as follows for the following sizes:

BG 1: $m_G = 20 \text{ kg}$

BG 2: $m_G = 30 \text{ kg}$

- 1 Anvil plate
- 2 Positioning pin, round
- 3 Positioning pin, flat-sided
- 4 Positioning plate

Process force decoupling PE 2/XX Components

- ▶ For mounting processes with especially high demands on vertical process forces
- ▶ To guide the belt or toothed belt near a load sensor to be constructed by the customer.
- ▶ Permissible vertical process force depending on the construction by the customer
- ▶ Lift below conveying level approx. 1 mm.
- ▶ Prepositioning via VE (accessories)
- ▶ Can be combined with workpiece pallets WT 2, WT 2/F, WT 2/H and WT 2/F-H, on which the customer must install spacer plates under the force introduction side

Notice: Combination with WT 2/LS not possible

The process force decoupling is assembled using the following parts:

- ▶ Spring element in designs with 5.8 N/cm and 10 N/cm specific section load, see p. 7-44
- ▶ Transition pieces to and from the spring elements, see p. 7-46
- ▶ Lateral guides, see p. 7-47

Required accessories

- ▶ Anvil (customer load sensor) to absorb process forces at the mounting location of the positioning unit
- ▶ Substructure plate for workpiece pallets to transfer the process forces to the anvil (provided by customer)
- ▶ Stop gate VE 2/..., see p. 8-6

Mode of operation

Vertical process forces are deflected via a load sensor constructed by the customer. In doing so, the plate of the workpiece pallet is supported via the spacer blocks on the anvil of the load sensor. The guide profile is replaced by spring elements near the load sensor to prevent the conveyor medium (belt or toothed belt) from getting jammed between the workpiece pallet and guide profile. The conveyor medium can thus be pushed down by up to 1.5 mm.

Spring element

- ▶ For mounting in sections where the workpiece pallet is stressed by the process forces
- ▶ For section loads of 5.8 N/cm and 10 N/cm

Scope of delivery

- ▶ Set containing 2x spring element

Dimensions

Lift rotary unit HD 2...

- ▶ Rotation angles on the Z axis: 90° or 180°. The rotational direction of the HD 2/90° can be individually selected for each workpiece pallet as required
- ▶ Lift WT 40 mm or 90 mm above conveying level
The version with a 40 mm lift is suitable for turning workpiece pallets directly above the conveyor section. If there are any components mounted at the side of the workpiece pallet, e.g. identification and data storage modules, it may be necessary to select the version with a 90 mm lift
- ▶ Max. permitted mass moment of inertia: 0.65 kgm²
- ▶ Can be combined with WT 2
- ▶ WT 2/LS can only be combined with lift rotary unit HD 2 in conjunction with a suitable conversion kit HD 2-LS, see p. 7-49

The lift rotary unit HD 2 turns workpiece pallets to the required orientation. On circuits without curves it ensures that the workpiece pallet always runs with the correct orientation, i.e., front is always front.

Work on the HD 2 is permitted without additional forces.

Required accessories

- ▶ Stop gate VE 2/..., see p. 8-6
- ▶ Sensor M12x1 with rated sensing range $S_N \geq 4$ mm, can be installed at 0.5 mm rather than being installed flush, see p. 8-112

Scope of delivery

- ▶ Incl. fastening material

Lift rotary unit HD 2/H...

- ▶ Lift WT above conveying level, approx. 50 mm
- ▶ Available in 3 sizes (BG) for WT total weights up to 240 kg
 - BG 1 and BG 2 for use with workpiece pallets WT 2, WT 2/F and WT 2/LS (only with version LS)
 - BG 3 for use with workpiece pallets WT 2/H and WT 2/F-H
- ▶ Rotation 90° or 180°
 - For rotating quadratic workpiece pallets 90° or 180°
 - 90° variant of BG 1, BG 2
Workpiece pallet rotation belt tape rotary cylinder rotation under belt
 - 180° variant of BG 1, 2, 3 and 90° BG 3 rotation and reverse rotation of the turnstile via belt
 - For rotating non-quadratic workpiece pallets 180°

7

The lift rotary unit HD 2/H turns workpiece pallets to the required orientation.

Required accessories

- ▶ Housing elements HD 2/H, see p. 7-58
- ▶ Leg sets for BG 2 over 50 kg, see p. 6-24
- ▶ Leg sets for BG 3 generally, see p. 6-24
- ▶ Cylinder switch (R412022863) for the top/center/bottom lift positions, see p. 7-52
- ▶ Sensor for rotary movement at 0°/180° or 0°/90°, see p. 7-52

Scope of delivery

- ▶ 2x damper for end positions of the rotary movement
- ▶ Incl. fastening material for assembly on conveyor sections
- ▶ Pneumatic elements such as fittings, throttle check valves, etc. for the top/center/bottom lift positions

Recommended accessories

- ▶ Stop gate VE 2, see p. 8-6, or stop gate VE 2/D, see p. 8-23, for damped stopping of a workpiece pallet
- ▶ Recommended accessories for BG3: Stop gate VE 2/D-100 (see p. 8-38), stop gate VE 2/D-250 (see p. 8-41)

Condition on delivery

- ▶ Assembled

Operating limits of the lift rotary unit HD 2/H...

Mass moment of inertia

Notice:

In the arrangement of supports and workpieces on the WT, it must be ensured that the center of gravity of the loaded WT is within 1/3 of the length/width of the WT around the center of the WT.

It must also be ensured that the load center of gravity at height h_s does not exceed 1/2 b_{WT} (with b_{WT} ≤ l_{WT}).

Size 1: Lift rotary unit HD 2/H, 3842998760
Lift rotary unit HD 2/H LS, 3842999023
Mass moment of inertia max. 1.8 kg m²

Size 2: Lift rotary unit HD 2/H, 3842998761
Lift rotary unit HD 2/H LS, 3842999024
Mass moment of inertia max. 15.9 kg m²

Size 3: Lift rotary unit HD 2/H, 3842998762
Mass moment of inertia max. 57.6 kg m²

Additional operating limits

- ▶ Switch bracket mounting at b x l_T 240 mm x 240 mm is only possible from outside => see S2
- ▶ Reversible operation possible from b x l_T 320 mm x 320 mm => see A and B

Transportation control

Transportation control selection

8-2

8

Transportation control selection

The modular units for transportation control are used to control the flow of the workpiece pallets on the transfer system. The transportation control involves stopping and separating pallets, inquiring the position of workpiece pallets, controlling all function processes, etc.

When workpiece pallets WT 2/E, WT 2 and WT 2/F are used, the stop gates VE 2/... are mounted directly on the section for lateral separation.

When workpiece pallets WT 2/H and WT 2/F-H are used, the stop gates VE 2/D...-H are mounted by a cross strut for central separation.

All VE 2/... (without VE 2/...-H) can be used for lateral separation.

All (without VE 2/D...-H) can be used for central separation.

Depending on the application and available space, stop gates may be mounted inside or outside the workpiece pallet.

Workpiece pallet WT 2 with lateral separation

Mounting in rear right position in the direction of transport, on the **inside** of the workpiece pallet surface

Mounting in front left position in the direction of transport, on the **outside** of the workpiece pallet surface

Workpiece pallet WT 2/H with central separation

Mounting inside the workpiece pallet surface

Mounting outside the workpiece pallet surface

Stop gates VE 2/...

The stop gates VE 2/... are used to stop and separate workpiece pallets, e.g. in an automated station. Actuation is performed pneumatically. In an unpressurized state, the stop gate is held in the lock position by a spring and thus contributes significantly to production safety.

Stop gates are available with and without integrated shock absorbers.

Depending on the application and available space, stop gates may be mounted inside or outside the workpiece pallet. Stop gates have mounting areas for sensors, which are used to monitor whether a workpiece pallet is standing at a stop gate or has passed it.

Dampened stop gates are used on conveyors where shock-sensitive and fragile parts are conveyed at speeds of up to 18 m/min.

All versions are designed as pneumatic stop gate with infinitely adjustable damping. This reduces the force of impact by up to 80% compared to an uncushioned stop gate. Dampened stop gates are not suitable for accumulation separation.

The electric stop gates are used for conveying parts in pneumatic-free systems. The load is exclusively in direction of transport, the latch is set up by a stepping motor. The noise generation is minimal and the installation effort is very low due to the omission of the pneumatic system.

Stop gate VE 2

- ▶ Pneumatic stop gate
- ▶ Tilting stop gate; can be opened without causing abrasion on the surface of the workpiece pallet stop surface
- ▶ Reversible operation not permitted
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F and WT 2/LS

Stops one or more accumulating workpiece pallets at the defined stop surface of the workpiece pallet stop surface. When the pressure is released, the stop gate is held in the

lock position by a spring and the workpiece pallet is stopped. Mounted inside the tracks, directly on the conveyor section.

Recommended accessories

- ▶ Return stop VE 2/RS, see p. 8-48
- ▶ Switch bracket SH 2/..., see p. 8-90
- ▶ Position sensing stop gate, see p. 8-18

Scope of delivery

- ▶ Incl. all fastening material to mount on the conveyor section ST 2/...
- ▶ Pneumatic elements

Condition on delivery

- ▶ Assembled

Stop gate VE 2/L

- ▶ Pneumatic stop gate
- ▶ Low noise; especially quiet operation during opening and closing, therefore especially suitable for manual workstations
- ▶ Tilting stop gate; can be opened without causing abrasion on the surface of the workpiece pallet stop surface
- ▶ Reversible operation not permitted
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F and WT 2/LS

8

Stops one or more accumulating workpiece pallets at the defined stop surface of the workpiece pallet stop surface. When the pressure is released, the stop gate is held in the

lock position by a spring and the workpiece pallet is stopped. Mounted inside the tracks, directly on the conveyor section.

Recommended accessories

- ▶ Return stop VE 2/RS, see p. 8-48
- ▶ Switch bracket SH 2/..., see p. 8-90
- ▶ Position sensing stop gate, see p. 8-18

Scope of delivery

- ▶ Incl. all fastening material to mount on the conveyor section ST 2/...
- ▶ Pneumatic elements

Condition on delivery

- ▶ Assembled

Stop gate VE 2/S

- ▶ Pneumatic stop gate
- ▶ Used on sections with possible reversible operation
- ▶ Pressure must not be exerted on VE 2/S by pallets traveling in reverse
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F and WT 2/LS

Notice: Safe transition from both directions is possible by actively (pneumatically) opening the safety catch.

8

Stops one or more accumulating workpiece pallets at the defined stop surface of the workpiece pallet stop surface. The VE 2/S can only stop workpiece pallets coming from one direction. When the pressure is released, the stop gate is held in the lock position by a spring and the workpiece

pallet is stopped. Two VE 2/S are needed to stop workpiece pallets coming from both directions of transport, since pressure must not be exerted on the stop gate by pallets traveling in reverse. Mounted inside the tracks, directly on the conveyor section.

Recommended accessories

- ▶ Return stop VE 2/RS, see p. 8-48
- ▶ Switch bracket SH 2/..., see p. 8-90
- ▶ Position sensing stop gate, see p. 8-18

Stop gate position sensing

- ▶ Position sensing for querying the upper and lower positions
- ▶ Position sensing stop gate for retrofitting on the stop gates VE 2, VE 2/M and VE 2/L
- ▶ Position sensing VE 2/S for retrofitting on the stop gate VE 2/S
- ▶ Compressed air connection for double-action stop gate operation

The stop gate position sensor is used to detect the position of the stop gate using sensors. In the pressureless state, the stop gate goes through a spring in lock position,

but is also optionally pneumatically controllable via the position sensing.

Required accessories

- ▶ Stop gates VE 2, VE 2/M, VE 2/L, or VE 2/S
- ▶ 2x sensor M8x1 with rated switching distance $S_N \geq 2$ mm, can be installed flush, see p. 8-116

Scope of delivery

- ▶ Incl. fastening material

- ▶ Can be combined with WT 2/E, WT 2, WT 2/F, WT 2/H, WT 2/F-H and WT 2/LS

Notice: The return stop VE 2/RS can only be installed outside the workpiece pallet surface on the WT 2/H and WT 2/F-H.

The return stop prevents the rebound impact of the workpiece pallet from the stop gate. The use of the VE 2/RS is especially recommended when the accumulation roller chain is used as conveyor medium in connection with undamped stop gates. In normal condition the stop gate is

moved into the lock position by a spring and the workpiece pallet overtravels the VE 2/RS in the direction of transport and is stopped against the transport direction. Mounted inside the tracks, directly on the conveyor section.

Scope of delivery

- ▶ Incl. all fastening material to mount on the conveyor section ST 2/...

Condition on delivery

- ▶ Assembled

Dimensions

Return stop VE 2/RS-H

- ▶ Spring-loaded safety catch
- ▶ Can be used on the left or right
- ▶ Easy fastening in the groove of the section profile ST 2/... or BS 2/...
- ▶ Pneumatic version, including pneumatic cylinder to open the safety catch. Necessary for reversible operation
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H and WT 2/F-H

Notice:

- ▶ The return stop VE 2/RS-H can be installed on the WT 2 and WT 2/F without spacers.
- ▶ Combination with WT 2/LS not possible

The return stop prevents the workpiece pallet from rebounding off the stop gate VE 2/D-... or the damper DA 2/...

The use of the VE 2/RS-H is especially recommended for high total weights and low damping.

In normal condition the stop gate is moved into the lock position by a spring and the workpiece pallet overtravels

the VE 2/RS-H in the direction of transport and is stopped against the transport direction. Mounted inside the tracks, directly on the conveyor section.

Notice: Reversible operation is only possible with the pneumatic version.

Condition on delivery

- ▶ Not assembled

Slide stop VA 2/50

- ▶ Slide stop, can be lowered pneumatically
- ▶ Reversible operation not permitted
- ▶ Removable slide stop position sensors
- ▶ Not suitable for sections ST 2...-H
- ▶ Can be combined with WT 2/E, WT 2, WT 2/F and WT 2/LS

8

The slide stop is used in a transverse section that connects more than two longitudinal sections and that requires supplementary stops. A lift transverse unit can feed in the workpiece pallet onto the longitudinal section when the

slide stop is activated.

When depressurized, the pneumatically lowered slide stop is extended to the upper end position. Mounted inside the tracks, directly on the conveyor section.

Recommended accessories

Slide stop VA 2/D-130

- ▶ Slide stop; can be lowered pneumatically, dampened stop
- ▶ Stopping on the outside of the frame module
- ▶ Can be used in reversible operation
- ▶ Design permits installation with a section gap from $a = 90$ mm when space is limited
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ 4 positions, can be moved to pneumatically: Upper, lower position and latch in the extended and retracted state
- ▶ 3 positions can be detected: Top, bottom and retracted stop rail
- ▶ Additional possibilities for installing sensors, advantageously in restricted conditions
- ▶ Can be combined with WT 2 and WT 2/F

Notice: Combination with WT 2/LS not possible.

The slide stop is used in a transverse section that connects more than two longitudinal sections and that requires supplementary stops. A lift transverse unit can feed in the workpiece pallet onto the longitudinal section when the

slide stop is activated.

The pneumatically adjustable slide stop is extended to the upper end position when the system is depressurized. Mounted inside the tracks, directly on the conveyor section.

Recommended accessories

- ▶ Sensor M12x1 (3842549814) with rated switching distance $S_N = 4$ mm, length 45 mm, see p. 8-112
- ▶ Clamping holder, see p. 8-62

Scope of delivery

- ▶ Incl. all fastening material to mount on the conveyor section ST 2/...

Damper DA 2/100-C

- ▶ For permitted total weight of workpiece pallets up to 100 kg
- ▶ Pneumatic damper
- ▶ Continuously adjustable
- ▶ During infeeding in a longitudinal section
- ▶ Optimal damping at a ratio of 2:1 between heavy and light workpiece pallets
- ▶ Can be combined with WT 2, WT 2/F, WT 2/H and WT 2/F-H
- ▶ Installation location: Section ST 2/... or belt section BS 2/...

The damper cushions the impact of the arriving workpiece pallet. The DA 2/100-C is suitable for infeeding from a transverse section into a longitudinal section. It is mounted directly on the section profile of the longitudinal section.

The pneumatic return occurs as the stop gate opens, which permits the workpiece pallet to move toward the damper. The damper is not traversable.

Scope of delivery

- ▶ Incl. fastening material
- ▶ Damper DA2/100-C for infeeding the workpiece pallets WT 2 and WT 2/F

Switch bracket SH 2/...

There are five types of sensor switch bracket available for use in the transfer system TS *2plus*. The switch brackets SH 2/... are only suitable for flush and non-flush mounting sensors.

Switch brackets SH 2/S, SH 2/ST, SH 2/S-H

8-92

Switch brackets SH 2/U, SH 2/UV, SH 2/U-H

8-98

Switch bracket SH 2/SF

8-104

Switch bracket SH 2/EP

8-106

Deflector

8-108

Switch bracket SH 2/S

- ▶ For fastening a sensor and attaching to the outside groove of a conveyor section
- ▶ Suitable for lateral sensing of the workpiece pallet position
- ▶ Simple, fast mounting and replacement of the sensor without adjustment through flush installation with defined switching distance
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/...-H with a profile width of 50 mm
- ▶ Changing the sensor is quick and easy by loosening a separate clamping screw. The switch bracket stays in position
- ▶ The short length of the switch bracket enables recognition of the operating status of the sensor
- ▶ The integrated cable routing and cable clamping allows secure and protected cable routing
- ▶ Side query adjustable
- ▶ One-time switch bracket setting on installation

The switch bracket can be used to fix a sensor M12x1 in place for lateral sensing of the workpiece pallet position.

Required accessories

- ▶ Sensor M12x1, $S_N = 8$ mm, $L \geq 44$ mm can be installed flush or not flush, see p. 8-112

Scope of delivery

- ▶ Incl. all fastening material to mount on the conveyor sections ST 2/...

Condition on delivery

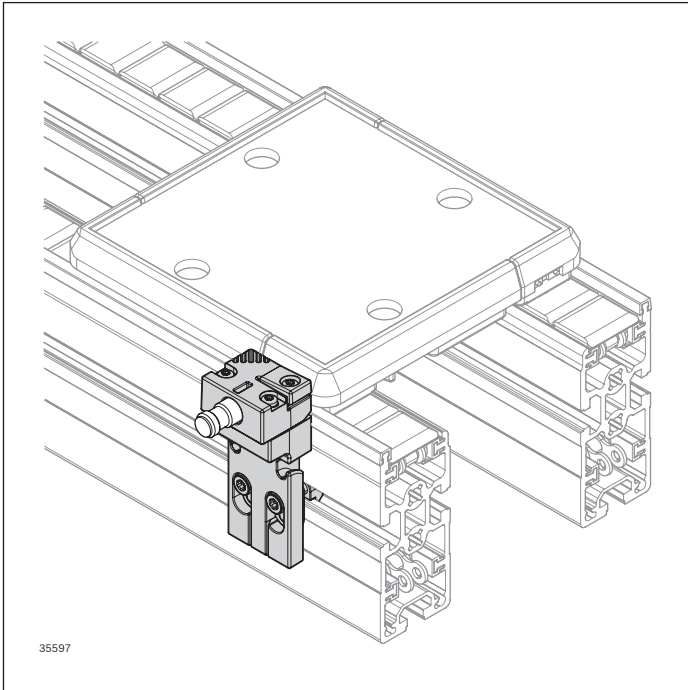

- ▶ Not assembled

Switch bracket SH 2/ST

- ▶ For fastening a sensor and attaching to the outside groove of a conveyor section
- ▶ Suitable for lateral sensing of the workpiece pallet position
- ▶ Switch cover to protect sensor and cable
- ▶ Transparent cover to recognize the operating state of the sensor
- ▶ Simple, fast mounting and replacement of the sensor without adjustment through flush installation with defined switching distance
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/...-H with a profile width of 50 mm
- ▶ Changing the sensor is quick and easy by loosening a separate clamping screw. The switch bracket stays in position
- ▶ The integrated cable routing and cable clamping allows secure and protected cable routing
- ▶ Side query adjustable
- ▶ One-time switch bracket setting on installation

The switch bracket can be used to fix a sensor M12x1 in place for lateral sensing of the workpiece pallet position.

Required accessories

- ▶ Sensor M12x1, $S_N = 8$ mm, $L \geq 44$ mm can be installed flush or not flush, see p. 8-112

Scope of delivery

- ▶ Incl. fastening material

Condition on delivery

- ▶ Not assembled

Frequency converter FU

U/f mode

A frequency converter is a power converter that adjusts the frequency and amplitude of AC voltage in order to directly power three-phase motors.

- ▶ VFCplus: U/f open loop, linear and quadratic
- ▶ SLVC: Sensorless vector control (torque/speed)
- ▶ VFC eco (energy-saving function)

1) $M = \text{const.}$
 2) Field weakening mode
 f = frequency
 f_N = nominal frequency

M = torque
 M_N = rated torque
 U = voltage
 U_N = nominal voltage

OPERATING MODES

U/f mode, U/f characteristic curve

The converter regulates motor voltage and keeps the frequency constant. Frequency and voltage are proportional to each other. Due to the inductive nature of the motor, this results in a constant torque over an extensive range without overloading the motor.

In U/f mode, the speed of the connected motor varies depending on the load.

For this reason, U/f mode is only adequate when speed does not need to be constant at all times and there is no heavy starting.

Field-oriented controller

The vector controller, also called the field-oriented controller, is a speed regulator that is based on an underlying current regulator.

The instantaneous active and reactive current components are regulated. In an electronic motor model saved in the converter, the motor parameters can be saved or, if necessary, automatically detected and adapted.

The instantaneous current is the only returned value used for control.

This value and voltage phasing is used to determine all necessary motor states (speed, slip, torque and thermal dissipation loss).

This makes very high speed and torque calibration ranges possible.

Frequency converter selection guide

Frequency converter FU/motec 8400

- ▶ Decentralized frequency converter for motor wall mounting
- ▶ U/f controller motor control, sensorless vector control
- ▶ Communication via field buses:
 - ASInterface
 - CANopen
 - EtherCAT
 - Profibus
 - PROFINET
 - Ethernet I/P
- ▶ Built-in brake chopper
- ▶ Protection class IP 66
- ▶ Output: 0.55 kW

Frequency converters EFC 3610 and EFC 5610

- ▶ Frequency converters for control cabinet installation
- ▶ U/f controller and SVC motor control (only possible with EFC 5610)
- ▶ Communication via field buses:
 - Multi-Ethernet interface
 - Sercos III
 - EtherCAT
 - Ethernet I/P
 - Profinet, Modbus TCP
 - CAN
 - Profibus
- ▶ Built-in brake chopper (max. 22 kW)
- ▶ Removable control panel for quick and easy commissioning
- ▶ I/Os: Analog voltage/current input/output switching
- ▶ Protection class IP 20
- ▶ Output: 0.44 kW; 0.75 kW
- ▶ STO, Cat. 4 SIL3 PLe (only for EFC 5610)

Frequency converter FU/motec 8400

Complete frequency converter (FU) consisting of the following modules:

- Frequency converter power unit
- Communication module
- Connection unit
- Attachment kit
- Optional: Connection cable for the plug-in connection to the gear motor (AT = S)

Required accessories

- ▶ Manual control unit, see p. 8-126
- ▶ Switching/potentiometer unit, see p. 8-126

In order to operate a gear motor with adjustable speed, the motor needs to be retrofitted with a frequency converter (FU). The frequency converter has a modular design so that it can be easily mounted on a leg set and connected to the motor by cable.

- ▶ Connection power: 0.55 kW
- ▶ (Connection voltage: 400 V \pm 10 % ... 460 V / 480 V \pm 10 %)
- ▶ Speed (v_N) depending on the speed range of the gear motor used
- ▶ Duty cycle ED: All motors meet the S1 (continuous operation) and S3 (start-stop operation with 70%/10 s) operation.

Notice: Maximum 10 m cable length between motor and frequency converter.

The individual modules can be ordered separately and are easy to connect with the screws supplied with the scope of delivery. For the internal and external voltage supply, the modules must be wired by the user.

Frequency converter FU: Power unit

- ▶ Power unit: 0.55 kW
(400 V ± 10% ... 460 V/480 V ± 10%)
- ▶ Easy commissioning via hand-held terminal
- ▶ Easy-to-replace memory module
- ▶ Large LED status indicator

Manual control unit

- ▶ For the parameterization of drives with frequency converters
- ▶ For controlling (e.g., block and release)
- ▶ For displaying operating data
- ▶ For infinitely variable control of the transport speed on drives
- ▶ For transferring parameter sets to other base units

Scope of delivery

- ▶ Incl. 2.5 m connection cable

Ordering information

Product description	Material number
Manual control unit	3842552821

Switching/potentiometer unit

The switching/potentiometer unit is used to fine tune the transport speed within a range that has been preset with the manual control unit. The switching/potentiometer unit is connected to the frequency converter by a cable. The drive can be started or stopped with the rotary switch.

Notice: It is imperative that the running direction of the chain conveyor is checked prior to commissioning.

Scope of delivery

- ▶ Incl. 2.5 m connection cable

Rockers WI/M, WI 2/...

Rockers are used for the following areas:

- For area monitoring
- As a stop for transverse conveying of workpiece pallets
- For workpiece pallet recognition

Depending on the desired function, the rockers WI/M, WI 2/... should be fitted with either one (WI/M) or two (WI 2/...) sensors (see p. 8-144).

ROCKER FUNCTIONS

Area monitoring

The stop rail leans slightly to one side and, together with a sensor, signals the presence of a workpiece pallet in the area of this rail. The length of the monitored area depends on the length of the stop rail. The sensor for the stop rail is damped when the rocker is deactivated. For WI/M, the sensor is damped when the rocker is activated.

Stop

At the end of a lift transverse conveyor the workpiece pallet is stopped by the slide stop or by the rocker in its capacity as a stop. Damped rockers WI 2/D are recommended for workpiece pallet total weights of > 35 kg.

Workpiece pallet recognition

If a rocker WI 2 is fitted with a second sensor, not only can an area be monitored, but the position of a workpiece pallet WT 2 – in position on the lift transverse unit – can also be recognized. This is, for example, necessary if rockers are used together with reversible lift transverse conveyors EQ 2. The second sensor, which can be fitted later whenever required, is attenuated if the workpiece pallet is positioned centrally in front of the activated rocker.

Rocker WI/M

- ▶ For area monitoring
- ▶ For workpiece pallet recognition
- ▶ For accumulation pressure regulation
- ▶ Simple and compact construction
- ▶ Suitable for mounting on a section ST 2/... with a profile width of 45 mm or a section ST 2/... H with a profile width of 50 mm
- ▶ Can be combined with WT 2, WT 2/F and WT 2/LS
- ▶ Suitable for use in an EPA

The rocker WI/M is used for area monitoring on transfer systems. The rocker WI/M is unsuitable for use as a stop for workpiece pallets arriving from the transverse conveyor. In addition, a stop or damper must be installed to absorb the impact pulse corresponding to the workpiece pallet weight. The spring-mounted rocker switch physically detects workpiece pallets. The metal element in the rocker switch

engages a sensor to enable detection. Alternatively, a pneumatic cylinder switch can be used to convert the rocker activation directly into a pneumatic signal. Simple, purely pneumatic accumulation pressure regulation can be established in conjunction with a stop gate VE 2.

Recommended accessories

- ▶ Sensor M12x1 with rated switching distance $S_N = 4$ mm (for rated switching distance ≥ 4 or ≤ 4 a correct query is not possible), overall length 70 mm, see p. 8-112
- ▶ Pneumatic cylinder switch, see p. 8-141

Scope of delivery

- ▶ Including fastening material for installation on conveyor sections ST 2/... or belt sections BS 2/...

Selection of accessories

The selection of accessories includes information on identification systems, as well as important elements for chain lubrication. It also contains longitudinal and transverse conveyor connection kits.

The use of the decentralized or central automatic lubrication unit for the automatic lubrication of our chains eliminates the need for manual lubrication.

**Identification systems****9-4****Decentralized automatic lubrication unit LU 2****9-5****Central automatic lubrication unit LU 2/P****9-7****Mounting kit LU 2/P, PA hose set, steel pipe set****9-9****Hydraulic blocks****9-10****Dosing valves****9-12****Adapter set****9-13****Automatic lubrication unit for linear section LU2/LS****9-15****Profile connector****9-16****Cross connector QV 2****9-17****Cross connector QV 2-H****9-18****Scraper****9-19****Cover rail for cable duct****9-20****Connection kits for longitudinal conveyors****9-21****Connection kits for transverse conveyors****9-22**

Identification systems

Identification and data tag systems are used to control numerous production and transport systems in assembly technology applications.

Data related to objects is the basis for

- ▶ VE, VE 2/M, VE 2/L or VE 2/S stop gates
- ▶ Sensor M8x1 with rated sensing range $S_N \geq 2$ mm, can be installed flush

You can find our current range of identification and data tag systems in the RFID systems catalog.

Decentralized automatic lubrication unit LU 2

- ▶ Modular design consisting of decentralized automatic lubrication unit LU 2, oil container LC 2 and adapter set
- ▶ Decentralized automatic lubrication unit LU 2 with drive, compressed air connection to drive module and fastening material
- ▶ Oil container LC 2 with Structovis GHD from Klüber; contains: 0.25 L (must be ordered separately)
- ▶ Specific adapter sets with compatible lubrication pins for different drive modules
- ▶ Adjustment of lubrication amount to be distributed per metering process on the decentralized automatic lubrication unit LU 2. The metering process is actuated by an external PLC
- ▶ Designed for lubricating one belt section or conveyor unit respectively
- ▶ Use of the decentralized automatic lubrication unit LU 2 is highly recommended for flat-top chains

Increasing the system service life through interval lubrication of flat-top chains, accumulation roller chains, and duplex chains during operation.
For preventing dry running.

Required accessories

- ▶ Oil container LC 2, see p. 9-6
- ▶ Adapter set, see p. 9-6

Condition on delivery

- ▶ Not assembled, fastening material enclosed
- ▶ Oil container LC 2 and adapter set as ordered

Suitable for use with all belt sections and conveyor units; lubrication unit on the drive module.
Reduction of oil consumption thanks to exact metering and pinpoint application to the chain links.

Central automatic lubrication unit LU 2/P

- ▶ An adaptive system for the simultaneous lubrication of several transfer sections with conveyor chains, together with distributor blocks, dosing valves, adapter sets and connection hoses or tubes
- ▶ A module structure made up of central automatic lubrication unit LU 2/P, a 3 L oil container, hydraulic blocks with 2...8 dosing valves and adapter sets for drive modules
- ▶ Simultaneous lubrication of several connected conveyor sections
- ▶ The lubrication amount can be adjusted to suit different section lengths and chain types by way of dosing valves
- ▶ Precise dosing by timing the central pump
- ▶ 24V DC motor
- ▶ Specific adapter sets with compatible lubrication pins for different drive modules
- ▶ The metering process is actuated by an external PLC.

The central automatic lubrication unit works with a lubrication pump which supplies a greater number of conveyor sections with lubricant at the same time via hydraulic blocks. The maximum distance from the pump to a drive module may be up to 30 m.

Required accessories

- ▶ Mounting kit LU 2/P 3842562923 for assembly to section profile, see p. 9-9
- ▶ Adapter set, see p. 9-13
- ▶ Connection cable with M12x1 plug for meter input and alarm output

Scope of delivery

- ▶ Pump with 3L oil container (not filled)
- ▶ Integrated control with display unit
- ▶ Connector for 24 V voltage supply
- ▶ Straight fitting G1/8" for optional connection of PA hose or steel tube

Selecting the valve and timing the central pump allows the overall lubrication amount, which is supplied to all connected conveyor sections, to be administered in doses. The lubrication amount can be adjusted to suit different section lengths or chain types by way of dosing valves which are screwed into the hydraulic blocks.

- ▶ Oil canister 5 L (Structovis GHD for initial filling)
- ▶ Hose (see p. 9-9), tube (see p. 9-9), hydraulic blocks (see p. 9-10), dosing valves with elbow fitting (see p. 9-12)

Condition on delivery

- ▶ Not assembled

incl. 42x tube clamps,
10x angle connector,
5x straight connector

Ordering information

Product description	Packaging unit	Material number
Mounting kit LU 2/P		3842562923
PA hose set D4x3, L=20	Set	3842562925
Steel tube set D=4 mm, 7x3 m	Set	3842562926
Oil can 5 liters		3842562941

Hydraulic blocks

- ▶ The hydraulic block has room for 2, 4, 6 or 8 dosing valves
- ▶ The radially mounted threads are provided for receiving the dosing valves
- ▶ The axially mounted threads are provided for connection to the pump LU 2/P or other hydraulic blocks
- ▶ The screw plug can be used to close one end of a line
- ▶ The connection can be made with hose or tube

Scope of delivery

- ▶ Incl. 2x straight connections for a hose and 2x hose connections, as well as 1x screw plug
- ▶ Incl. 2x T-nuts and 2x cylinder head screws for mounting on the section with a groove width of 10 mm

Ordering information

Product description	Material number
Hydraulic block LU 2/M-2 for 2 dosing valves	3842562927
Hydraulic block LU 2/M-4 for 4 dosing valves	3842562928

* Assembly on return unit UM

Technical data

Automatic lubrication unit for linear section LU 2/LS

- ▶ Modular assembly consisting of automatic lubrication unit LU 2/LS, grease cartridge LU 2/LS and adapter set
- ▶ Adjustment of lubrication amount to be distributed per metering process on the automatic lubrication unit LU 2/LS.
- ▶ Increasing the system service life by periodically lubricating the guide rails during operation. For preventing dry running.

Notice: 2 lubrication units are required for each section routing (1x left, 1x right)

Required accessories

- ▶ Grease cartridge LU 2/LS 3842562441

Scope of delivery

- ▶ Incl. adapter set

Condition on delivery

- ▶ Not assembled, fastening material enclosed

Ordering information

MTpro – planning software

MTpro is a software program used for planning assembly systems. It assists you from selection to configuration and ordering of the Rexroth products. The program offers the following functions and full content in seven languages (en/de/fr/es/it/ja/zh):

Layout Designer for planning and designing complete frames and conveyor systems

- ▶ Simple design using the drag & drop and snap functions without a CAD system
- ▶ Design logic for automatic configuration and assembly adaptation
- ▶ Automatic order list generation of all small parts and accessories
- ▶ Export of 3D volume models
- ▶ Library for saving and reusing your own modules and layouts

Product information

- ▶ Technical data
- ▶ Catalog data sheets
- ▶ Assembly instructions
- ▶ Spare parts lists and drawings

Configuration and calculation

- ▶ Product configuration and generation of ordering information
- ▶ Issuing of order lists in user-specific presentations
- ▶ Direct connection to Rexroth eShop
- ▶ Quick & Easy profile configuration and drafting
- ▶ Other design and calculation programs

CAD library

- ▶ Configurable CAD models
- ▶ Memories in standard formats
- ▶ Direct integration into all common CAD systems

System requirements

- ▶ Windows from version 10 onwards
- ▶ USB data tag in vCard format
- ▶ At least 6 GB of free hard drive space
- ▶ Adobe Reader from version 10 onwards
- ▶ Internet access for Layout Designer licensing and automatic updates

The image shows a computer monitor displaying the MTpro 5.0 software interface, which includes a 3D model of a conveyor system and a list of parts. Below the monitor is a product information card for Bosch Rexroth AG. The card contains the following text:

System specifications

APPLICATION

The Rexroth transfer systems all form a program of fine-tuned mechanical components that are used to convey, separate, and position workpiece pallets. With these components, you can create almost any system layout you need.

The systems are primarily used to convey workpieces (on Rexroth workpiece pallets) to and from manual or automatic work stations on an assembly line.

PLANNING

Transfer system planning (the combination of components into a modular system), setup, initial commissioning and maintenance should only be done by trained personnel. Rexroth offers training courses for this.

SCOPE OF DELIVERY – SMALL PARTS

The sensors, pneumatic valves, and electrical and pneumatic installation material that are necessary for operation are usually not included in the scope of delivery. These parts are only preassembled if doing so guarantees special functional safety or if installing them at a later point would require a disproportionate effort.

Please note the references for the required flow control valves and check valves in the pneumatic switching plan (listed in the assembly and operating manual) must be followed.

NOTICES

Examples

Installation references, pneumatic switching plans and typical function processes are described in the catalogs and assembly instructions. These must be followed when setting up and commissioning the system.

CE IDENTIFICATION, RESPONSIBILITY

Components that fall under the EC Machinery Directive are delivered with the corresponding declaration of incorporation. Overall responsibility for system safety (declaration of conformity, CE identification) lies with the system builder. The references in the assembly instructions and in the Instructions for Employees on Safety – 3842527147 – must be followed.

MEDIA RESISTANCE

Our products are guaranteed to be resistant to numerous media common to manufacturing, such as water, mineral oil, grease and detergents. Contact your Rexroth representative if you have any doubts about resistance to specific chemicals, e.g. test oil, doped oils, aggressive detergents, solvents, or brake fluid. Avoid prolonged contact with highly reactive acidic or alkaline materials.

CONTAMINATION

Wear may increase dramatically if the system is contaminated due to environmental factors, particularly with abrasive media such as sand and silicates, but also due to processes running on the transfer system (e.g. welding beads, pumice dust, glass shards, shavings, or lost parts, etc.). In such cases, maintenance intervals must be substantially shortened.

Functional safety

Resistance to media and contamination does not mean that functional safety is guaranteed in every case.

- ▶ Liquids that thicken on evaporation and are highly viscous or adhesive (sticky) could lead to a disruption in function.
- ▶ Media with lubricating properties may reduce the drive power that is caused by friction if they are transported on systems with belts or round belts.
- ▶ The chain lubricant used on systems with conveyor chains can be washed away with solvents or detergents.

Such cases require special attention when planning the system and adjusting the maintenance intervals.

ENVIRONMENTAL SUSTAINABILITY, RECYCLING

The materials used are environmentally friendly. They can be recycled or reused (components may have to be processed and replaced). Recyclability is ensured by the selection of materials and the ability to take the components apart.

PNEUMATIC CONNECTION DATA

Oiled or non-oiled, filtered, dry compressed air.
Operating pressure 4...6 bar
Performance data is for an operating pressure of 5 bar.

MAINTENANCE

The TS components require very little maintenance. If maintenance-free operation cannot be achieved at an economically justifiable cost, maintenance instructions are specified in the operating manual.

WEAR

Wear is caused by the basic principle of this system and cannot be avoided. Design measures and appropriate materials help ensure functional safety over the service life of the product. However, wear depends on the operating, maintenance, and ambient conditions of the system and the location (resistance, contamination).

MEASURES TO REDUCE WEAR

The following measures reduce wear and the friction caused by it:

- ▶ Switch off conveyor sections when the system is not running, e.g. during breaks, overnight, on the weekend.
- ▶ Do not select conveyor section speeds that are higher than those required for the particular function
- ▶ Minimize the weight of the workpiece pallet – do not overload workpiece supports with material.
- ▶ Avoid unnecessary accumulation section, e.g. by reducing the number of WTs
- ▶ Switch off accumulation sections carrying heavy WTs if transport is not necessary.
- ▶ Very important: Avoid contamination by abrasive media or reduce contamination with regular cleaning

LOAD SPECIFICATIONS

Permitted loads apply for conveyor sections under the condition that only workpiece pallets with the maximum total permitted weight have accumulated. Higher loads are permitted if accumulation can be safely avoided. Accumulation operation is not permitted on lift transverse units.

WEAR AND CONVEYOR SPEED

Nominal data for the permitted workpiece pallet weight describe operation at standard speeds and under normal operating conditions. Wear on the WT wear pads and the conveyor medium will not influence system function throughout the service life.

WEAR AND HIGHER/LOWER LOADS

Higher loads may lead to more wear and thus require, among other measures, shorter maintenance intervals. A linear decrease in wear can be calculated for lower loads (half load = half the wear = twice the service life).

LOADING THE WORKPIECE PALLET, COMBINATION OF EMPTY AND LOADED WORKPIECE PALLET

When setting up and testing the modular units, the workpiece pallets should not all have the same weight on the conveyor sections, i.e. full and empty WTs should all come through the circuit.

Extreme differences in weight may require special measures to avoid functional disruptions. This applies, e.g. to the permitted accumulation length before stop gates, for the function of dampers and damped stop gates, and also for accumulation in curves.

Function is usually not limited if the weight ratio is 2:1 between heavy (loaded with a workpiece) and light workpiece pallets (empty).

LOADING THE WORKPIECE PALLET, MINIMUM WEIGHT

The minimum weight of the workpiece pallet is generally not relevant. In special cases, depending on the marginal conditions, an application-specific minimum weight may be required for safe and continuous transport. This can occur, for example, if switching elements have to be manually operated (on the rocker), or if a lighter WT does not run smoothly when changing directions, e.g., jumps out of the guide on the HQ. In such unusual cases, additional weight should be added when designing the workpiece support.

OVERLOADING

Overloading the conveyor sections may damage the conveyor medium and cause the motor and gears to break down.

When overloading of pneumatic components occurs, function cannot be guaranteed.

TRANSPORT SPEED, INFLUENCE ON WEAR

Wear on the conveyor medium, slide rails, WT wear pads and the like is proportional to the transport speed. This means that, in comparison to the standard speed of 12 m/min, when running at 18 m/min the wear limit is already reached at $12/18 = 2/3$ of the running time.

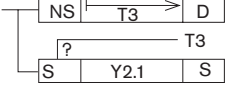

Transport speed, dynamic influences

When the transport speed increases bumps when changing directions and the rebound force on the stop gates also increase. This may require longer damping periods or shock absorbers before the next movement. If accumulation roller chains are the conveyor medium a return stop combined with stop gates is recommended for operation at higher speeds.

Function plans

On the following pages, you can find proven fundamental function plans for control tasks in transfer systems.

Characters are used in the action blocks that deviate from DIN IEC 61131-3. They are explained in the following table.

Action block	Explanation
	Storing
	Non-storing
	Set
	Reset
	Non-storing trigger of a time function (with runtime T), after which a switching function is triggered.

Simple stop gates VE 2 are used to stop workpiece pallets. The position of the workpiece pallets is queried with separate sensors.

The function plans are simplified accordingly if using stop gates with integrated sensors and internal switching logic.

General abbreviations

WT	=	Workpiece pallets
VE	=	Stop gate
S...	=	Signal transmitter
Y...	=	Valve
Z...	=	Cylinder
LT	=	Longitudinal conveyor (main section)
QT	=	Transverse conveyor (secondary section)
HQ	=	Lift transverse unit
DA	=	Damper
①	=	Start pulse after end of start-up
②	=	Enable cyclic travel

Function plan HD 2/H (BG1, BG2, BG3)

ROTATION ANGLE 180°

Function plans HQ 2/C-H, HQ 2/G-H

Notes for HQ 2/C-H and HQ 2/G-H in combination with WT 2/H or WT 2/F-H

DA 2

- ▶ For conveyor function units TFE 2 and TFE 4, damper extension must be delayed.
This ensures that the HQ 2 is already in the upper position

Implementation in transverse section (TFE 1)

FUNCTION PLAN FOR HQ 2/C-H AND HQ 2/G-H IN COMBINATION WITH WT 2/H OR WT 2/F-H

- ① = Start pulse after end of start-up
 - ② = Enable cyclic travel
 - S2 = WT after VE2
 - S3 = WT in position on HQ 2
 - S4 = Enable secondary section, HQ 2 free
 - S5 = HQ 2 in the lower position
 - Y1 = Main section VE 2 (Z1)
 - Y2 = HQ 2 up (Z2)
 - Y3 = HQ 2 down (Z2)
 - Y4 = Extend damper DA 2 (Z4), stop position
- Notice:
- Central position of HQ 2 is centered by springs (without pressurization)
 - Distance Z1-Z3 IWT +200 mm

See also explanation on page 10-7

Implementation in longitudinal section (TFE 2)

FUNCTION PLAN FOR HQ 2/C-H AND HQ 2/G-H IN COMBINATION WITH WT 2/H OR WT 2/F-H

- ① = Start pulse
- ② = Enable cyclic travel
- S1 = WT after VE 2
- S2 = WT in position on HQ 2
- S3 = Enable main section, HQ 2 free
- Y1 = VE 2 secondary section (Z1)
- Y2 = HQ 2 up (Z2)
- Y3 = HQ 2 down
- Y4 = Extend DA 2 damper

Notice: Distance Z1–Z3 bWT +200 mm

See also explanation on page 10-7

Outfeeding from longitudinal conveyor (TFE 3)

FUNCTION PLAN FOR HQ 2/C-H AND HQ 2/G-H IN COMBINATION WITH WT 2/H OR WT 2/F-H

- ① = Start pulse
- ② = Enable cyclic travel
- S1 = WT after VE4
- S2 = WT in position on HQ 2
- S4 = Enable secondary section, HQ 2 free
- S3 = Enable main section, HQ 2 free
- Y1 = Main section VE 2 (Z1)
- Y2 = HQ 2 up (Z2)
- Y3 = HQ 2 down (Z2)
- Y4 = Extend DA 2 damper
- A1 = Straight-ahead signal

Notice:

- Central position (WT 2 stop position) of HQ 2 is centered by springs (without pressurization)
- Distance Z1-Z3 IWT +200 mm
- Distance S2-S3 = min. 200 mm

See also explanation on page 10-7

Infeeding to longitudinal conveyor (TFE 4)

FUNCTION PLAN FOR HQ 2/C-H AND HQ 2/G-H IN COMBINATION WITH WT 2/H OR WT 2/F-H

- | | | | |
|----|-------------------------------------|-----|-------------------------------|
| ① | = Start pulse after end of start-up | S6 | = WT after VE 2 |
| ② | = Enable cyclic travel | Y1 | = VE 2 secondary section (Z1) |
| S1 | = WT before VE 2 | Y2 | = VE 2 secondary section (Z2) |
| S2 | = WT after VE 2 | Y3 | = HQ 2 up (Z3) |
| S3 | = WT in position on HQ 4 | Y4 | = HQ 2 down |
| S4 | = WT after HQ 4 | Y5 | = Extend DA 2 damper (Z4) |
| S5 | = WT before VE 2 | P10 | = Priority |

Lift EL 2 (infeeding + outfeeding)

- 1 Infeeding
- 2 When O1 = on, stop
- 2a Check O1
- 3 When R1 = on, stop
- 3a Check R1
- 4 Outfeeding

- 5 Infeeding
- 6 When O2 = on, stop
- 6a Check O2
- 7 When R2 = on, stop
- 7a Check R2
- 8 Outfeeding

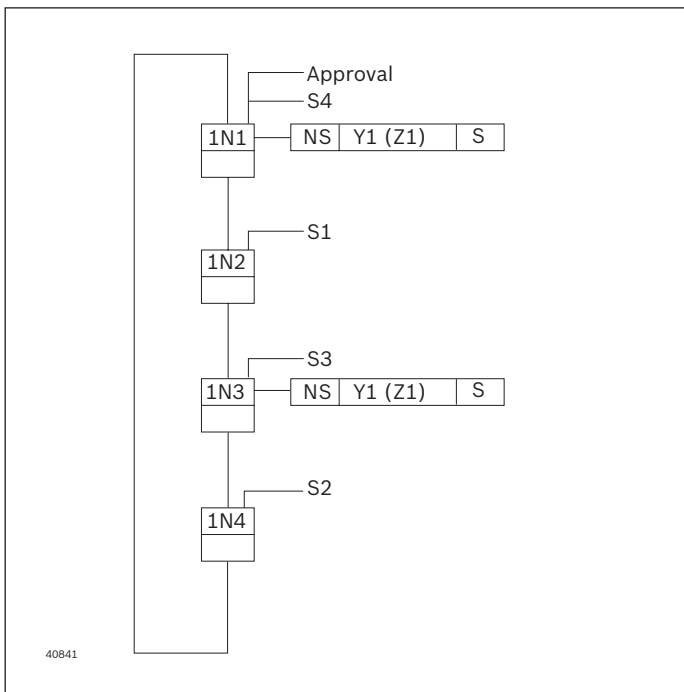

- ① = Start pulse after end of start-up
- ② = Enable cyclic travel
- S1 = WT before VE 1
- S2 = WT after VE 1
- S3 = WT on gripper arm
- S4 = Gripper arm zero point
- Y1 = VE 1 (Z1) main section
- M1 = Servomotor
- O1 = Optical sensor
- P2A = WT at control point before vertical motion
- P2 = WT at hold point before vertical motion
- P3A = WT at control point before horizontal motion
- P3 = WT at hold point before horizontal motion
- R1 = Drain area occupied (rocker actuated)
- S5 = WT has left the lift completely, start return
- A1 = Position mode, steps reached

*) Malfunction

**) C-shape, reverse

See also explanation on page 10-7

WT 2/LS: Sequence of double stop gate, double stop gate stop

- S1 = WT after stop gate (VE1)
- S2 = WT after stop gate (VE2)
- S3 = Position sensing VE1 up
- S4 = Position sensing VE2 up
- Y1 = VE1 (Z1)
- Y2 = VE2 (Z2)

See also explanation on page 10-7

Motor data/motor connection

Electrical connection requirements:

Connection to a 3-phase, 5-wire system (L1, L2, L3, N, PE);
 a connection plan is included in the terminal box.

All motors are equipped with a thermal contact*,
 which has to be connected to an overload switch-off.

All of the motors comply with protection class IP 55.

*) Bi-metal thermal contact, opening, tripping at 150 °C ± 5 °C.

Frequency converter (FU)

Drive spectrum of motors with frequency converters (FU)

Technical data

Duty cycle ED: All motors meet the S1 (continuous operation) and S3 (start-stop operation with 70%/10 s) operation.

Notice: Maximum 10 m cable length between motor and frequency converter.

Technical information:

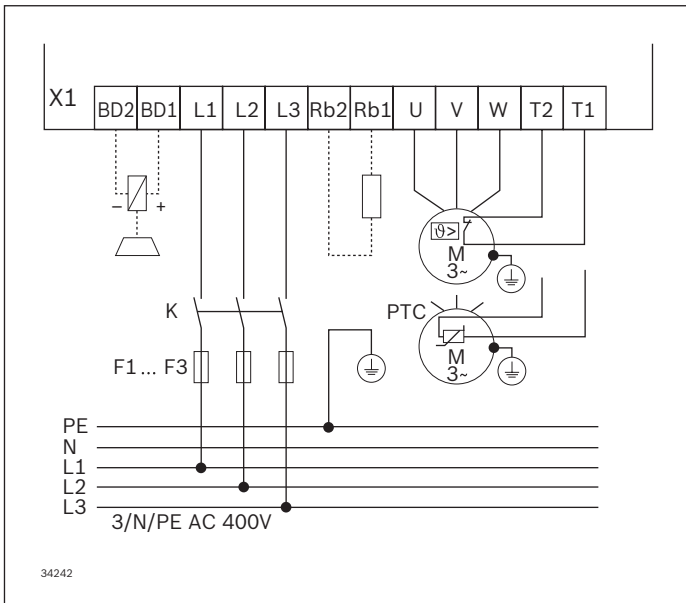

At rotating field frequencies of ≥ 15 Hz, the motor can be operated under normal operating conditions without an external fan. The motor's thermal conditions should be considered at rotating field frequencies of ≤ 20 Hz. In the range 20 ... 50 Hz, the full torque is available. At rotating field frequencies > 50 Hz, higher speeds can

also be achieved with a corresponding drop in performance.

The speed range of the frequency converter is based on the base speed of the motor (by accepting a resulting loss of power, a higher bandwidth can be covered).

Motor speed range at 50 Hz (m/min)	Min. (m/min)	Max. (m/min)	Max. at max. 80 % (m/min)
4	2*	4.5	6
6	2*	6	8
9	3.5	10	13
12	4	13	17
15	5	15	20
18	6	18.5	25

* Additional measures may be necessary

Frequency converter (FU) accessories

In order to operate a drive with a frequency converter (FU), the user needs to work out the minimum wiring for the internal and external voltage supply (see terminal assignment plan left).
