How can you outsmart the competition? Simply automate!

A payload of 5 to 18 kg and a reach of 850 to 1800 mm – all delivered at joint speeds of up to 225 degrees per second: Our five lightweight 7-axis robots are ready to go to work in virtually no time – at companies of all sizes.

Our concept of simply automate comes from our unique benefits:

- Plug-in configuration
- Intuitive programming with a phone-like user interface
- Easy relocation within a factory thanks to the lightweight design
- And, above all, higher production

Your robot colleague will take over the repetitive and physically demanding jobs in your factory so workers can then perform jobs that generate more value.

Your major benefit: Every cobot made by Kassow Robots has a 7th axis. This axis gives our cobots the highest possible degree of freedom. The robot's arm mimics the dexterity of the human arm. A feature that enables it to reach around corners.

From standard to sophisticated tasks, our cobots are prepared to perform the infinite number of jobs required in factory automation operations (see page 4).

Kassow Robots: Product Family

	Reach/Payload
KR810	850 mm/10 kg
KR1018	1000 mm/18 kg
KR1205	1200 mm/5 kg
KR1410	1400 mm/10 kg
KR1805	1800 mm/5 kg

KR810

KR1018

KR1205

KR1410

KR1805

- 7 axes
- Lightweight robots
- Payloads of up to 18 kg
- Reach of up to 1800 mm
- Speeds of up to 225 degrees per second
- Perfect for human-robot collaboration (HRC)

Great potential for beginners and pros

- Providing you with our modular platform CBuns for capability extensions
- Seamless end-of-arm tooling that is easy to install and configure
- Option to extend any kind of software based on efficient C/C++ code using robot API
- Option to prepare and import your own custom code into our system
- 500Hz servo loop
- ROS integration

WELDING

QUALITY INSPECTION

SCREWING

LABELLING

DISPENSING

Cobots with maximum dexterity in action

Pick & place, machine tending, welding, gluing, labelling, palletizing: From small batch to 24/7 mass production, our lightweight robots can perform virtually any production task.

The special kinetics created by the 7th axis allows Kassow Robots to outclass conventional cobots.

Kinematic examples:

- Any predefined path – straight, zigzag, or curved – can be followed without stopping and at a pre-set speed.
- The extraordinary maneuverability allows the cobots to be used in the most confined spaces – an invaluable benefit in the push to automate existing production.

Gaining far more production with 7 axes

Your added value created by our lightweight robots

- **Great maneuverability & around-the-corner reach**
You can use the robot's arms in extremely confined spaces – and profit from the tremendous flexibility created by the 7th axis!
- **Easy programming & operations**
Divorce yourself from robot experts – program and operate the cobots yourself!
- **High flexibility & fast relocation**
Use the cobots in different places within your production facilities – the cobots' light weight and the plug and play approach makes it possible!
- **Employees & cobots team up**
Delegate the repetitive and unsafe jobs to your robot colleagues – and allow your employees to generate more added value elsewhere!
- **Fast ROI & more satisfied employees**
Our cobots pay for themselves quickly – boost your competitiveness with their high productivity!

Robots that can share work space with humans without being placed in safety enclosures are called collaborative robots or simply "cobots." In the process known as human-robot collaboration (HRC), a robot's various skills (e.g., strength, precision, and stamina) are combined with the strengths of humans (e.g., make decisions, evaluate alternatives). As a result, robots and humans can work near one another. The entire process is safe: if, for instance, a cobot encounters a barrier, it will shut off automatically.

"Strong, Fast, Simple" and lots of added value created by the 7th axis – company founder Kristian Kassow continues to look out for the customers.

Sales Director Dieter Pletscher shows just how easy it is to operate a cobot. "It reminds me of a smartphone."

Dimensions and special product features

Robot head & ports

All cobot models

Dimensions of the base plate

KR810, KR1205

KR1018, KR1410, KR1805

Connectivity

- Three I/O ports with 24V power
 - Ethernet port (ModBus TCP)
- Our cobots can be connected directly to end-of-arm tool.

Free drive button

- Flexible waypoint programming
- Operation without a user panel

About Kassow Robots

"Strong, Fast, Simple": With this motto in mind, the Danish entrepreneur Kristian Kassow has developed five unique, efficient, lightweight robots with 7 axes. Manufactured in Copenhagen, KR cobots are extremely strong and fast, despite their long reach. They offer a payload of up to 18 kilograms, a reach of up to 1800 millimeters, and a speed of up to 225 degrees per second. Their exceptional maneuverability enables industrial companies to automate production processes even in the most confined areas. The cobots are operated and

programmed with the help of teach pendants developed on the basis of widely used tablet technologies. It is an intuitive process and can be done by anyone – a feature that creates more independence and cost efficiency.

Kassow Robots made its first public appearance in 2018. In late April 2022, Bosch Rexroth became the company's new majority owner. Founder Kristian Kassow is now co-owner and will continue to serve as CEO of Kassow Robots.

Extensive Partner Network – reliable partners

Did you know that Kassow Robots has developed an extensive network of business partners across four continents and 30 countries and is continuously expanding its network?

Our partners are from medium-sized enterprises, speak the language of our end customers, and are available to assist them even after the purchase of the 7-axis cobots.

The Kassow Robots partner network and we look forward to your request:
